

TeamViewer Frontline Enterprise Industrial Augmented Reality Platform

Digitalize and streamline processes for your frontline workforce with augmented reality-powered visual workflows and video remote support — optimized for mobile and wearable devices to increase productivity, efficiency, and quality along the entire industry value chain.

What is TeamViewer Frontline?

TeamViewer Frontline is an enterprise augmented reality platform, designed to boost efficiency and simplify the processes for frontline workers in deskless environments — essentially, 80 percent of today's workforce in factories, warehouses, production plants and other industrial workspaces.

The TeamViewer Frontline platform includes Frontline Creator, Frontline Workplace, and Frontline Command Center and can be deployed on-premises, in the Frontline Cloud, or in your private Cloud, according to your IT infrastructure requirements.

Frontline Creator

An easy-to-use visual designer, Frontline Creator enables you to set up and edit customized augmented reality workflows applications with drag-and-drop simplicity — no coding, programming, or IT development required.

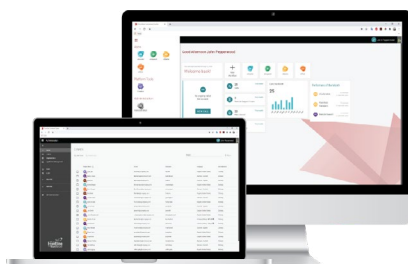

Frontline Workplace

TeamViewer Frontline Workplace runs on mobile and wearable devices, including smart glasses, tablets, and smart watches. With various customizable modules, highly optimized for wearables, Frontline Workplace supports manual tasks by displaying relevant information when frontline workers need it, right in the field of view of their smart glasses. This enables employees to work more efficiently and effectively with both hands free for error-free quality.

Frontline Command Center

A web-based centralized management hub, Frontline Command Center enables you to administer the modular Frontline solutions and manage your workforce by assigning tasks or providing help through remote support. Get total visibility into shop floor processes: analyze KPIs, see task overviews, review device statuses, and generate reports.

Solution Highlights

Scalability

Quickly and easily scale the solutions, replicating workflows across multiple sites for consistency.

Usability

Easy-to-use with a visual drag-and-drop user interface (UI) — no coding or programming required.

Adaptability

Send workflow task changes to frontline workers' smart glasses and wearables in real time to meet changing process requirements.

Agility

Quickly create and dynamically update workflows to adapt to unforeseen or on-the-fly process changes.

TeamViewer Frontline Industrial Augmented Reality Solutions

The TeamViewer Frontline enterprise augmented reality platform enables you to create customized augmented reality workflow apps that run on mobile and wearable devices, optimized for manual processes in industrial workplaces. From vision picking with xPick, to assembly tasks with xMake, to inspections and maintenance with xInspect, and see-what-I-see augmented reality remote support with xAssist, TeamViewer Frontline helps you connect your workforce to increase productivity, improve operational efficiency, and boost overall customer and employee satisfaction.

Professional Services, at Your Service

Your success is our success. And that's why we offer comprehensive professional services to simplify and optimize your Frontline solution deployments, ensuring your success from day one.

From initial discovery consultations to define business and technical requirements, to collaborating with partner hardware vendors, we work closely with your team every step of the way to customize Frontline workflows, components, and features to meet your needs.

We'll help you select the optimal hardware and implement Frontline solutions in your manufacturing plant, factory shop floor, or warehouse. As always, stay connected with our help desk and technical support with individual service-level agreement plans, designed for your ongoing success.

Customer Success

Customers around the world trust TeamViewer Frontline industrial augmented reality solutions.
