

Power Apps: Workplace Wizard

A safe return to your workplace

Challenge

Keeping 1,5 meter distance at the office results in less office space. When employees want to work at the office they need to reserve a desk to guarantee health safety and an equal chance for every employee to work at the office.

Solution

The PowerApp uses either Common Data Service or SharePoint to store available desks, departments and buildings. Reservations can be made one week in advance and are stored in CDS/SharePoint as well. Power Automate is used to send a confirmation email and automatically deactivate past reservations.
