

# Civility, safety and interaction online: Peru 2021

In an effort to promote safer, healthier, and more respectful online interactions among all people since 2016, Microsoft has been surveying teens and adults around the world about the state of digital civility. This latest survey marks the sixth straight year of that research, where we again asked respondents about their exposure to 21 different online risks across four categories: behavioral, sexual, reputation, and personal/intrusive. The effects of COVID-19 continued to impact perceptions of digital civility. In total, over 11,000 respondents in 22 countries participated, equally divided between teens and adults, including 504 respondents in Peru. The research was completed in April and May 2021. Read on for a summary of the latest results, some of which may surprise you.

## Digital Civility Index (DCI)\* score: 72%

\*DCI: lower scores mean lower risk exposure

-2%

YoY change in DCI

-3%

improvement in DCI by females. Males improved slightly by 1%

Females accounted for 84% of the improvement in DCI

## The burden of risk mostly fell on women

Women experience

53% of risks

More consequences  
More worry  
More pain

"I became less trusting of other people online"

"I experienced lower self-esteem"

41%  
Women

32%  
Men

35%  
Women

22%  
Men

\* % extremely, very or somewhat worried

## Perceptions about online civility during Covid-19 were less positive

While personal exposure to risks declined (DCI), perceptions about the overall state of online civility worsened

28%

reported civility worsened during the pandemic

28%

said the state of online civility was good 3 points higher than in 2020

23%

said the state of online civility was bad 4 points higher than in 2020

## Positive outcomes during Covid **decreased**

-18%

A greater sense of community

-14%

I see more people helping each other
