

**How would YOU answer these questions?**

When was the last time we checked to see if all of our Office 365 settings are configured the way we expect?

What would happen if someone inside the organization had access to something they shouldn't have?

How good are we at keeping up-to-date with all the changes Microsoft makes to Office 365?

How many global administrators do we currently have and how are we securing those identities?

How would we know if we were under a brute force or advanced phishing attack?

Is there a chance that external users have access to our internal content or devices?

Is our setup in line with current best practices? How can we tell?

### Do you want some peace of mind when it comes to Microsoft 365?

If you answered "I don't know" to any of the questions on the left, it might be a good idea to "inspect what you expect" from your Office 365 configuration.

Microsoft's goal when it comes to Office 365 is to make it easy to use and to collaborate...but that doesn't always mean they have your best interests at heart when it comes to security and compliance.

That's where we come in. We know how to sort through all of the myriad configuration options to find that needle in the haystack that could be exposing you to risks that you aren't aware of or aren't prepared to mitigate.

Trust us, we didn't wake up with this knowledge. Our deep experience with managing Office 365 environments can be your solution to understanding your gaps in your configuration and how to fix them.

Our Oakwood 365 Team of Experts can review your tenant and produce a report of our findings – along with any red flags we find – in less than a week. And unlike some firms, we actually take the time to make sure you understand our recommendations.

**Don't go it alone. We can help. We do Microsoft 365.**
