# Azure Sentinel at the heart of your Modern SOC

With the use of **machine learning and AI,** Sentinel can detect attacks, establish patterns and aggregate security information providing the your Modern SOC with an **extensive and comprehensive view** and **control** of organisation-wide security infrastructure, to in turn **support** your security model.

1 Our design and deployment services will ensure that millions of threat signals are continuously monitored to ensure that you are able to react to compromised accounts or endpoints through coordinated cyber-attacks.

2 We help you establish the capabilities analyse the data, whilst referencing other intelligence services, and establish who was attacked, the type of attack and what was compromised, enabling you to send out real time notifications to your business.

3 We will test, validate and prove out your new SOC capabilities, and provide you with clear evidence of their effectiveness, and show you an analysis of the cost and ROI of running the services long-term.

4 Once established, we will support your transition to your Modern SOC, including the provision of managed services support, and supplementary guidance and training that will embed Azure Sentinel and Azure Security Center into your ways of operating.
