Denials Prevention Powered by AI

Let machine intelligence drive your analysis and workflow

Lumedic Alphalytics SaaS offering identifies likely denials enabling clients to take action preventing future payment delays and lost revenues.

This solution aggregates disparate data streams into one application and uses machine learning to identify denials hotspots and hidden denials from seemingly unrelated data. Daily revenue risk scoring provides the insights to guide decision making. The metrics, reporting, and benchmarking solutions in Lumedic Alphalytics provides revenue cycle professionals with the timely visibility for process improvement.

WHY WE BUILT LUMEDIC ALPHALYTICS:

Budgets and resources are getting slashed year after year, but revenue cycle teams are still tasked with responding to never-ending onslaught of denied claims. We've developed a methodology and predictive solution to reduce denials by using AI to allow organizations to be data-driven in their denials prevention strategy.

WHY LUMEDIC ALPHALYTICS?

- Discover hidden denials patterns using AI

- Reduce first pass denials and write-offs

- Automate denials reporting and analysis

Discover Hidden Denial Insights

Our machine learning algorithm finds denials hotspots or dense clusters of denials, including those you know about and those you don't.

Data-Driven Denials Prevention Strategy

Denials management and prevention teams can focus only on denials hotspots that lead to the highest ROI, reduction of administrative burden or opportunity to collect.

Propensity to Recover ML Unlocks Automation & Improves Recovery

Our proprietary Propensity to Recover score tells you which accounts to focus on and which ones to outsource or auto-close. All integrated into your workflow.
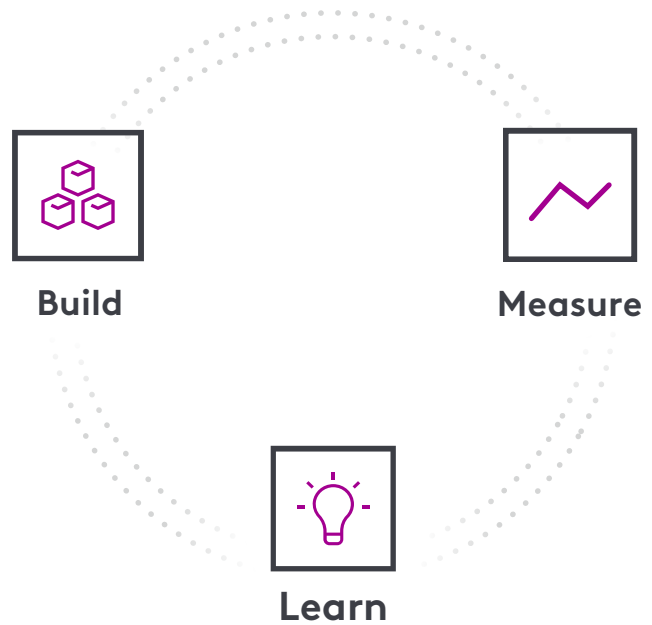

"Through our experience with utilizing Alphalytics, we now have the tool to accurately quantify the absolute denied net revenue on an initial and final basis. After examination of these amounts we better understood that we had to take a different approach to denials avoidance"

– Director, Atrium Health

Be Proactive, Not Reactive

A data-driven scientific method to preventing denials

- Built on Microsoft Azure cloud platform to provide our customers with world-class security, compliance and ML services

- Born out of Providence St. Joseph Health, we're customer obsessed from day one and developed our solution hand in hand with revenue cycle leaders as well as insights from top management consultants in healthcare and business.

Build

Measure

Learn

Build

Prioritize denials hotspots by net revenue opportunity and past success for recovery

Create solutions, whether operational changes, coding edits, or other EMR rule edits to address denial issues

Measure

Powered by Microsoft Azure

Measure and monitor denial solutions in flight

Alert when anomalies are detected in the data or a threshold has been met

Learn

Iterate and Learn

Track hotspots over time and review efficacy of solutions

Retrospectively evaluate efficacy of solutions. Iterate.

Care Through Cooperation

We are a Health Information Logistics company, compelled by patient-centered design, to optimize the way people access, manage, and pay for healthcare
