

Truveta for Health Systems

Truveta is an opportunity for innovative health systems to join together and apply their collective de-identified data to empower every physician to be an expert, advance health equity, and save lives. Truveta's members provide over 16% of the United States' clinical care, representing the full diversity of our country across age, geography, race, ethnicity, and gender. To join other leading health systems and be part of the Truveta community, contact us at info@truveta.com.

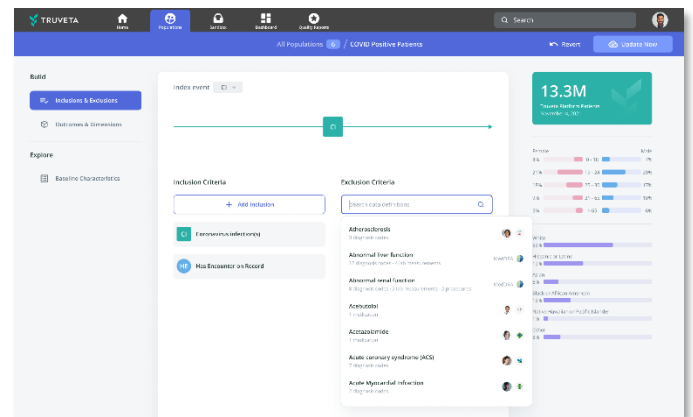

A learning community for advancing patient care

Truveta accelerates clinical research learning into clinical practice. The Truveta Platform enables researchers to easily build on each other's work across health systems, readily share their data-driven questions and answers, and ultimately speed their time to insight.

Transformation of clinical data for healthcare operations and research

Truveta structures and normalizes all EHR data from its health system members (e.g., labs, vitals, diagnosis codes, procedure codes, physician notes, imaging and pathology reports, images, and genomics), and then de-identifies it daily through machine learning. Landmark clinical studies are continuously simulated against the structured data to ensure quality. This unprecedented data platform enables research on all health conditions, and provides the most current picture of patient health.

New funding to advance your mission in your community

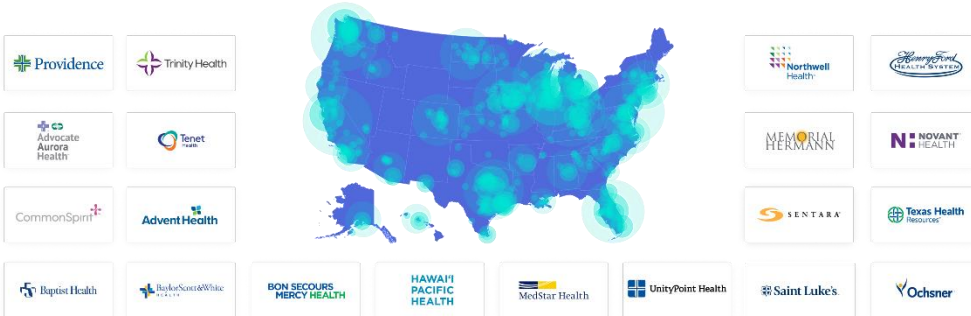

With each health system that joins Truveta, rarer and more precision conditions can be researched well, accelerating insights we need for better patient care. Health systems receive compensation when their de-identified data is used in research by others, enabling them to re-invest back into their communities.

Why Truveta?

Health system innovators typically sit on mountains of data, but rarely can access that data to glean insights into improving patient care and operations. Health system members partner with Truveta to help:

- › **Improve patient care**
Variation in patient care today is enormous. Truveta offers insights across health conditions, treatments, and outcomes so physicians can learn how to best treat patients and share this knowledge broadly.
- › **Advance health equity**
Marginalized communities, especially communities of color, suffer from various diseases more than other parts of our overall population. With exceptional data diversity, Truveta can help improve health equity, fueling understanding and better care for all communities.
- › **Expedite the rare disease diagnostic odyssey**
There are nearly 7,000 rare diseases affecting 30 million people in the U.S. Truveta can help inform physicians and families on the best treatment and therapies.

Our health system members govern Truveta, holding us accountable to earning the trust of their patients with the highest standards of ethics, privacy, and security.

FROM OUR MEMBERS

“Information is key to solving many of the most challenging healthcare problems. With Truveta, we will have a secure, de-identified nationwide data system, representative of diverse populations, helping us get to discovery faster. This will enable us to provide better care to our communities and save lives with data.”

Rod Hochman, M.D.
President & CEO, Providence

“We believe the cure for certain diseases could lie within the Truveta platform. For the first time in the history of health, we have enough data at scale to dramatically advance innovation in healthcare with collective commitment to partner on ethical innovation.”

Michael Slubowski
President & CEO, Trinity Health

“Truveta, at its very essence, is about providing the optimal care possible for everyone. We are bringing together collective information from some of the most innovative health systems in the United States. Truveta will be transformative because it brings us together in a village of innovation and creativity, even while thousands of miles apart.”

Michael Dowling
President & CEO, Northwell Health
