

Microsoft Azure Sentinel Workshop

As IT becomes more strategic, the importance of security grows daily. Security information and event management (SIEM) solutions built for yesterday's environments struggle to keep pace with today's challenges—let alone tomorrow's unimagined risks.

Azure Sentinel delivers intelligent security analytics and threat intelligence across the enterprise, providing a single solution for alert detection, threat visibility, proactive hunting, and threat response.

Get an overview of Azure Sentinel along with insights on active threats to your Microsoft 365 cloud and on-premises environments with an Azure Sentinel Workshop.

Gain visibility into threats across email, identity, and data

Better understand, prioritize, and mitigate potential threat vectors

Create a deployment roadmap based on your environment and goals

Understand the features and benefits of Azure Sentinel

Choose the approach that's best for you

Every organization is different, so this workshop can be customized to fit your environment and goals. We can provide either of two scenarios:

Remote Monitoring

If your organization doesn't have its own security operations center (SOC) or if you want to offload some monitoring tasks, we will demonstrate how ProArch can perform remote monitoring and threat hunting for you.

Experience the benefits of a managed SIEM with a true cloud native SIEM, managed and monitored by our cybersecurity experts.

Joint Threat Exploration

If your organization is interested in learning how to integrate Azure Sentinel in your existing SOC by replacing or augmenting an existing SIEM, we will work with your SecOps team and provide additional readiness to bring them up to speed.

Receive hands-on experience, learn how to discover and analyze threats using Azure Sentinel and how to automate your Security Operations to make it more effective.

Workshop Objectives

Through this workshop, we will work with you to:

Discover threats to your Microsoft 365 cloud and on-premises environments across email, identity and data.

Understand how to mitigate threats by showing how Microsoft 365 and Azure security products can help mitigate and protect against threats that are found.

Plan next steps and provide information to build a business case for a production deployment of Azure Sentinel including a technical deployment roadmap.

What we'll do

- Analyze your requirements and priorities for a SIEM deployment
- Define scope & deploy Azure Sentinel in your production environment
- Remote monitoring (*optional component*) and proactive threat hunting to discover attack indicators
- Discover threats and demonstrate how to automate responses
- Recommend next steps on how to proceed with a production implementation of Azure Sentinel

See and stop threats before they cause harm with an Azure Sentinel Workshop.

ProArch was founded on the belief that a future where change is 'business as usual' is fundamentally more exciting than one where it is not.

We accelerate value and increase resilience for our clients with consulting and technology- enabled by cloud, guided by data, fueled by apps, and secured by design.
