

ManagecoreGo is intelligent Cloud hosting services of your SAP® and IT systems including infrastructure support and ongoing monitoring on Azure. The cloud, similar to on-premise infrastructure requires day-to-day support and ongoing management just like any other hardware environment.

Technical expertise is required to properly configure instances, set up the network, set security rules, architect high-availability, disaster recovery, and monitor everything to ensure on-going health of the full environment. Managecore's experienced public cloud certified engineers guarantee a smooth-running environment.

ManagecoreGo Service Offering Includes:

- **Configure and manage:** Cloud resources as required, add/remove instances, disk, networks
- **Cloud infrastructure:** Support and ongoing monitoring
- **Backup & Restore:** configure and manage backup routines including retention and duplication
- **Capacity planning:** Review monitoring and capacity trends, recommend changes, modify as required

Simplify Public Cloud Infrastructure Management

Work with the ONE team, Managecore. With dual certified SAP and Cloud experts our team is your 'one stop shop' for the full hands on management of your SAP and IT systems.

The **managecore** Solution

“ After Managecore successfully delivered a complex migration to Azure, they are now focused on tuning Direct Relief’s systems and optimizing our use of cloud resources to reduce costs. The Managecore team has developed a solid track record of dependability and professionalism. ”

– Adan Grouman, Director of IT
