

# Celerity's Azure RPA Starter Kit

## Automation Anywhere A2019 RPA Starter Kit

Celerity helps businesses thrive in a changing environment by leveraging our proven frameworks and expertise to enable you to connect, adapt and accelerate transformation in your organization. This engagement will result in a working RPA process and environment, and enablement for your team to operate, expand and optimize your Robotic Process Automation workforce.

### WHAT WE OFFER

A fully functional RPA offering tailored to your business. This solution includes consulting to identify high value workloads, design, implementation and training so your company can operate and expand RPA throughout your enterprise.

Enterprise A2019 is the first cloud-native RPA platform, and Celerity is partnered with Automation Anywhere to offer A2019 on Azure. This offers ease of management, scale, resilience and operates as a service, removing operational overhead.

Utilizing Celerity's market-proven RPA approach, companies with little or no RPA experience in-house can adapt existing business knowledge and process and apply the A2019 solution components to drastically reduce Level of Effort.

Until now, roughly 20% of processes could be automated due to unstructured and dark data. A2019 utilizes Artificial Intelligence and Machine Learning to enable automation for "dark" data from images and PDFs to open up 80% of processes.

### WHAT AUTOMATION ANYWHERE'S CUSTOMERS ARE SAYING

*"45,000 hours saved in the first 12 months alone."*

**- Symantec**

*"Robust Security was our top reason for using RPA."*

**-Worley Parsons**

*"Automation Anywhere helped achieve financial recurring value in less than 15 months."*

**-Synergy**

Automation Anywhere's A2019 Enterprise RPA is the first cloud-native solution on the market, and is now available on Microsoft Azure, obviating complex and expensive infrastructure requirements. Efficiently scale your RPA solution up and down in sync with your reporting cadences, keeping costs low and efficiency high.

## KEY USE CASES

### A/P and A/R

Access Unstructured Data from Invoice Documents, Update Vendor Records, Payment Validation and Processing

### FINANCIAL ANALYSIS

Free Up Time to Analyze Financial Trends by Automating manual data entry and formatting with RPA

### STRENGTHEN GOVERNANCE

RPA will provide visibility and enable you to tighten controls, improve accuracy and compliance

### AUTOMATE RECONCILIATION

Use RPA to eliminate manual tasks associated with reconciling bank and general ledger balances

### INCREASE EFFICIENCY

Reduce manual work, lower labor costs, eliminate human errors and improve data validation across systems

## WHY RPA?

### REDUCE OPERATING COSTS

Leverage automation to increase economies of scale and value-added work, while reducing operating costs. Your most manual and most critical processes can be efficiently adapted to attended or unattended RPA.

### STREAMLINE HR OPERATIONS

Automate manual HR administration to focus on the high-value HR initiatives such as employee development and analytics.

### IMPROVE OPERATIONAL AGILITY

Deploy bots to work alongside human counterparts for cross-communication between legacy and new platforms.

### INCREASE CAPACITY

Automate data entry and data validation workflows for 24/7 output. Improve morale and provide growth opportunity for those with organizational memory. Transition your knowledge workers to higher-value activities.
