Text Classification Engine

"Deploy Enfo's text classifier on your data"

Enfo

Enfo is a Nordic IT service company focusing on data-driven business transformation

We have a proven track record in transforming data into knowledge, trusted by many industry leaders

Text Classification Engine

- **What is it?**

Enfo's Text Classification Engine is a service where we tailor our existing text classifier to suit your needs using your data. The classifier is built using Azure ML Studio and deployed as a REST API so you can easily integrate the classifier to other web applications.

- **To whom?**

The service is suitable for all organizations across all sizes and industries who are looking for ways to streamline their text processing activities.

- **Why?**

Enfo's Text Classification Engine has a proven track record of classifying up to 90% of incoming service requests. By tailoring the existing classifier for your needs, the results are quickly realized.

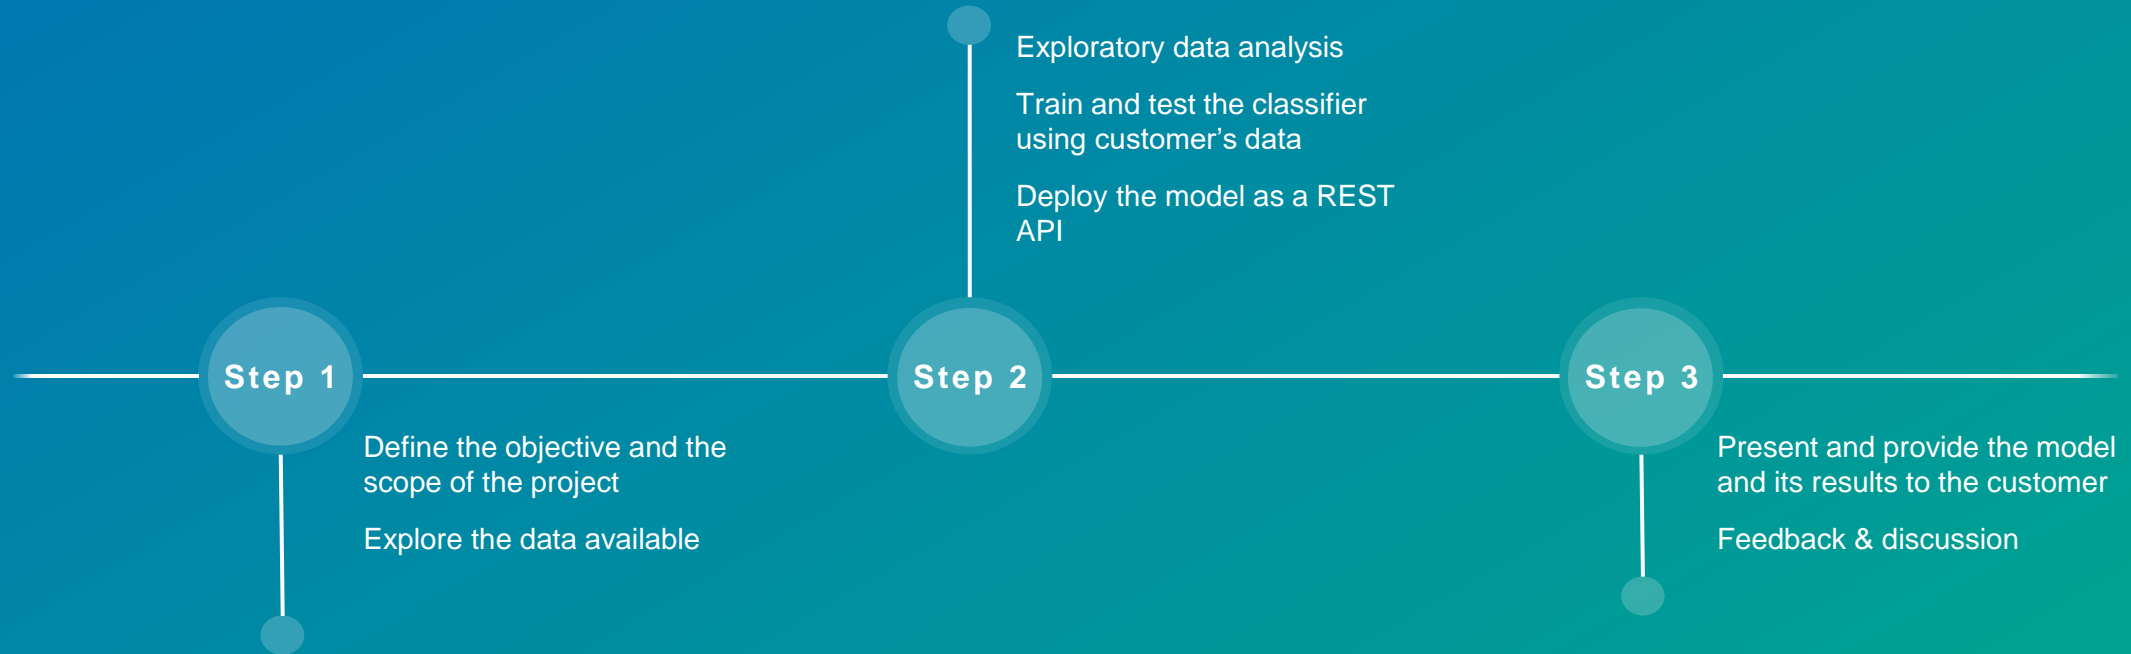

Benefits of Text Classification Engine

- Get a text classifier that is easily integrable to your existing applications
- Automate your text processing activities
- Reduce manual labor
- Easily approachable
- Fast results
- Get a solid foundation for further development

“Enfo is a trustworthy partner with whom there will be no negative surprises. Customer is involved well and informed about the progress. Everything works well and smoothly. In terms of costs, this has been the best performance amongst the IT projects I’ve seen so far”

Erkka Sarnola
Business Development Manager, Carlson
