

UNIFIED TECHNOLOGIES LIGHTHOUSE

WORLD CLASS & CO-MANAGED CYBER SECURITY-AS-A-SERVICE

Unified Technologies is a Cyber Security Operations Center (CSOC) and Microsoft Cloud Solutions Partner (CSP) providing on-going management and monitoring of your **Azure Sentinel** Cloud SIEM.

Unified Technologies uses a very unique Co-Managed approach to Cyber Security and Managed Network and System services, which are delivered as a Service by our SOC-2 certified world class engineers and analysts and enhanced with innovative and actionable security intelligence. The end result is much better ROI and much more peace of mind. Working shoulder to shoulder with your security team we become an integrated extension of your security resources, and our tools and methods become part of your toolkit and procedures. With Unified Technologies as your partner, we jointly enable your company to achieve an enhanced secure environment, without the enormous initial capital outlay and recurring incremental costs necessary to build a world class CSOC on your own.

Unified Technologies provides a fast and efficient, white glove approach to setting up your dedicated Azure Sentinel environment and working with you to connect your various Microsoft Cloud subscription event sources and third-party cloud and on-premises events sources such as AWS, Fortinet, Palo Alto, and more.

Unified Technologies employs senior security analysts and engineers to respond to attacks against your business during business hours or 24x7 in alignment with your risk management needs. Unified Technologies provides its CSOC services from its Miami, FL headquarters. Continuous alert monitoring across all log sources, Enrichment of alerts with daily integration of new IOCs, Alert triage and investigation to eliminate false positives, Escalation of only real incidents needing your attention, Containment and remediation playbooks, Manual monthly Threat Hunting sessions, Onboarding of new log and event sources, Monthly threat reporting, Managed Services.

Stay informed with activity reports

Ensure transparency across all service provider actions with on-demand auditing and activity logs. Take the uncertainty out of guest access with real-time insights about who accessed which resources when, and what actions they took, including all PIM-related activity, available directly in all Azure Resource Manager-based logs.
