Pain-free SharePoint Intranet implementations

SharePoint provides the functionality to address many business needs. However, addressing the needs of multiple business units can quickly add complexity, time, and cost to a project and hinder user adoption.

When time and resources are at a premium, organizations must find ways to deliver necessary functionality while removing cost overruns and delays.

KiZAN Can Help.

Keys to Success

The most successful SharePoint implementations:

▶ Emphasize native capabilities of the platform you already own

▶ Take full advantage of "out of the box" functionality

▶ Deliver attractive and intuitive design

▶ Engage your business users with the right level of training, mentoring, and support so they understand the value of the solution

▶ Leverage KiZAN SharePoint Apps and Webparts to meet common intranet needs
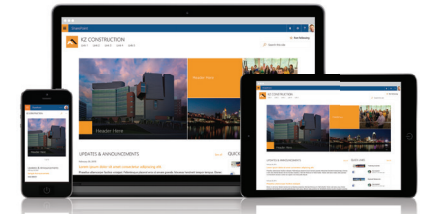

How KiZAN Helps

Built on the SharePoint Modern Communication Sites, KiZAN offers five starter concepts to quickly design and deploy your custom intranet. Our modern intranet site designs incorporate the native capabilities of SharePoint in ready to use, cost-effective packages and provide an easy to maintain platform for communicating company initiatives, news, announcements, policies, and procedures.
