

Secure user identities

Securing Identities Workshop

Workshop highlights

 Get a rating of your identity security posture and see how it compares to your peers

 Gain insights into apps used in your environment – even ones unsanctioned by IT

 Understand how to prevent identities from being compromised

 Learn how to reduce costs and improve business agility and security with simplified app access

“Identity and threat protection are high on customers’ minds. Getting identity right is a critical part of a Microsoft 365 project and is the first place we start. ”

-Forrester 2020 Microsoft 365 Enterprise Total Economic Impact Study

Are you aware of suspicious user and sign-in behavior in your environment? Are you threatened by ongoing suspicious requests?

Protect user identities

Identity is today’s control plane for digital transformation. Organizational barriers are blurring between who is in and out of your network. Cloud apps and the increasing use of personal devices and remote work mean that data is no longer centralized behind traditional network security.

With identity attacks on the rise, this workshop will show you how to stop tomorrow’s data breaches by securing identities today.

Delivered by a Microsoft expert partner they will help you find identity risks happening now in your environment, gain insights on your application landscape, and improve your identity security posture.

Why you should attend

Given the complexity of identities, data, applications, and devices, it’s essential to learn how to ensure the right people are accessing the right information, securely. In this workshop, we’ll show you how identity is the fundamental pillars of an integrated security philosophy and end-to-end security strategy.

By attending, you can:

Optimize identity

Identify potential risks related to identity and see opportunities for improvement.

Assess security posture

Receive a numerical rating of your identity security posture and see how it compares to similar organizations.

Reduce costs

Minimize expenses associated with password reset and helpdesk resources.

Increase visibility

Get a sample survey of apps your employees are using and if IT supports them or not.

What to expect

The foundation of cybersecurity is to quickly and accurately identify authorized users and give them proper access to the information and tools they need to do their job. The goal is to provide you with tools to protect your authorized users' identities so you can authenticate credentials and manage file access while still giving users the freedom to collaborate with others.

Our partners will work with you to:

- Understand your identity goals and objectives
- Define your existing and desired identity security posture
- Provide insights into applications used within your environment (sanctioned and unsanctioned by IT)
- Showcase core IT and user security scenarios through demos
- Develop a joint action plan based key results, recommendations and next steps

Our partners will customize the workshop based on your organization's needs
