AI Results: Proof-Of-Concept

Active Solution's AI results will help you move your AI ideas from whiteboard to reality.

AI Results

The AI-Results consists of these parts:

- An initial education for the participants where we try different technologies and learn how and when to use different AI-services.

- A deep dive in the chosen technology based on the upcoming Proof-Of-Concept.

- Last and most important, a Proof-Of-Concept based on the current use case.

It all starts with a free-of-charge evaluation of the idea and a proposed plan of how to proceed so we will make sure the Proof-Of-Concept will fit into this 2-day exercise.

We will explore most Azure Cognitive Services within decision-making, language understanding, Speech processing, Content analyzing and Web search. We will also explore Azure Machine Learning. In the Proof-Of-Concept phase we will choose relevant service(s) depending on the current use case.
