Software Development

**Technology Operations**

DevTestOps
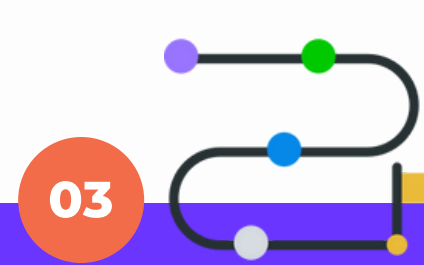

Software Development

01 Information gathering about processes and services

02 Deployment processes analysis, environments and core services

**03** Creation of roadmap with the different processes that we will work

04 Creation of testcases for different productss

05 Creation of document cost/time from different tests implementation

Our focus

03
Agile

02
Support in CI/CD proccess

04
Testing in all environments/levels

01
Be preventives

Ensure the compliance to good practices in developer, product and operation team

05
Infraestructure Abstraction

clever it

Characteristics of our tests

Integation with Azure DevOps

Time optimization

Scalability

Security

Dockerizing

Gherkins

Executions all time, all day

Page Object Model

Cross-browser executions

Data integrity
