

# Microsoft Security Services for Modernization

Protecting your modern enterprise

Security

## What is Microsoft Security Services for Modernization?

Keeping your business secure is more complex than ever before. The threat landscape is continuously growing in both volume and sophistication. It's imperative to evolve your cybersecurity strategy as quickly as the threats persist and grow, but it's a challenge to do this alone. Cybersecurity is a team sport and Microsoft can help.

Microsoft Security Services for Modernization was created for customers that want to leverage Microsoft best practices and know-how as they embrace new modern security capabilities and embark on their security transformation. This service provides in-depth consulting that help customers at any stage of their security journey to modernize their security posture and embrace a zero-trust approach. Our modernization services utilize extensive cybersecurity knowledge and industry expertise gathered over 35 years to keep your business secure.

### Transformative expertise

Mitigate business risks and meet compliance requirements with proven practices, processes, and policies.

### Seamless scalability

Build and enable security controls leveraging Microsoft and partner ecosystem.

### Constant improvement

Work with dedicated security experts to monitor and evolve your security posture.
