Cloud & IT services

ARCHITECTURE

Leveraging years of cloud computing experience, our professional Software and Infrastructure cloud architects will work together and assist you in choosing the cloud architecture that best suits your business needs. Our experts will perform the following: Review your architecture, map and analyze best practices, tailor a suite of services and technology for you, support in setting up Multi-cloud & Hybrid-cloud and eventually partner hand in hand with your development and ops team to establish best in class cloud solution.

CLOUDOPS

Our cloud operation experts will be the engine behind your cloud migration journey. Following the architecture team direction, they will perform various operations for you: set your Landing Zone, configure your identity & Access, help setup cloud accounts, security and governance of network and storage, so they will be controlled, but yet felxible.

DEVOPS
Bringing the infrastructure and the development teams together is where our DevOps team excels. Optimizing years of experience in cloud and on-prem development our DevOps team will implement practices and tools just right to automate your development effort while increasing reliability and minimizing disruption.

COST OPTIMIZATION

Matching the cloud cost to the customer's specific needs is one of the things we do best. We analyze cloud requirements and offer the best optimized setup that will reduce your overall cost. This is achieved by detecting mismanaged resources, eliminating waste, leveraging capacity to get higher discounts and right-sizing computing services to scale. Our philosophy is that an optimized cloud cost model is the outcome of an ongoing effort that stands on top of 4 major building blocks: FinOps, Architecture, OPS and Reports.

CLOUD SECURITY

Utilizing our partners' security experts we will recommend methods and innovative technologies to enhance the security of your cloud-based environment. We will assist you in all aspects of cloud security design and implementation, assemble security solutions specifically designed for cloud-based digital platforms.
