

# FleetTracker

## WEB-BASED FLEET MANAGEMENT SOLUTION

FleetTracker is a powerful, web-based fleet tracking and management solution scalable from a single vehicle up to thousands. The intuitive browser interface provides single click access to fleet dashboards, customizable reports, compliance tools as well as real time, user defined alerts. Combined with unique interfaces for tire pressure monitoring, vehicle diagnostics and more, FleetTracker is the ideal solution for proactively monitoring and improving fleet efficiency.

### UNIQUE INTERFACES

FleetTracker offers a growing list of unique interfaces including tire pressure monitoring systems, vehicle diagnostics, and more. Live monitoring and historical review of the fleet or individual vehicles is as simple as point and click.

### VISUALIZATION

Flexible visualization provides greater context when managing your fleet. FleetTracker supports Road, Terrain and Satellite Views in combination with custom overlays, such as weather, to provide the best visual context when you need it.

### TRAFFIC/ROUTING

Real time traffic information can be overlaid with a single click to improve routing around congested traffic while also identifying nearby fleet vehicles to improve dispatch times.

### LANDMARKS

User definable landmarks provide geo-fencing capabilities around important areas or prohibited locations. Combined with the customizable Alert Engine, landmarks enable real time, exception based notification to authorized users based on geographic proximity, inclusion or exclusion.

### ENTERPRISE DASHBOARD

Real time dashboards provide vehicle and fleet wide visual summaries of commonly tracked features such as distance traveled, idle time, speeding, stops and engine on/off reports. Simple bar graphs and pie charts are rendered in real time with clear color codes for fast visualization and corrective action.

### COMPLIANCE

FleetTracker is a flexible platform ready for current and future compliance requirements as they come on line. Reports such as State Mileage help support fleets looking to meet IFTA requirements while the flexibility of the system ensures future compliance requirements can be implemented swiftly without costly new software purchases.

### ALERTS

User customizable alert templates and alert rules can be configured to send out the right message to the right person at the right time. The flexibility of the alert engine means SMS or e-mail alerts can be automatically generated to notify arrival times, speeding, panic events and more.

### REPORTS

Authorized users can run comprehensive reports based on a growing library of templates for individual vehicles or the entire fleet. Granular parameters such as driver group, vehicle, driver, time and date are all user selectable.

### About ThinAir

ThinAir Telematics, based in Houston, Texas, is the premier provider of fleet management and GPS tracking solutions for any size business. Our solutions offer real-time insight into mobile and fixed assets to reduce operational costs and improve customer service, safety, and security. Our intuitive web-based and mobile applications empower users to quickly adopt and realize rapid ROI. For more information, please visit [www.thinair.com](http://www.thinair.com)
