

# Click2Cloud's ESG Reporting Service

## OVERVIEW

Reporting on **ESG/Sustainability strategy and performance matters** to many stakeholders, and its importance continues to increase for investors. Climate change has become a major topic for investors who themselves receive demands from their clients and other stakeholders to demonstrate their portfolios' climate-related impact and climate resilience.

**High-quality reports** can make a difference in gaining valuable contracts and working with companies of similar values. Likewise, companies can mitigate supply chain risks of poor social and environmental practices by encouraging transparency in their procurement processes.

**Click2Cloud's ESG reporting service** help companies identify the best strategies and approaches to addressing environmental, social, and governance issues by leveraging Azure data platforms.

We at Click2Cloud provide an ESG data strategy that systematically discovers, extracts, and employs data from the current environment to meet ESG and sustainability reporting needs. Our data strategy incorporates future needs regarding ESG reporting due to regulation and compliance requirements and best practices integration with Microsoft Cloud for Sustainability and Microsoft Azure.
