Value proposition

The Microsoft Defender for Endpoint deployment offer is designed to understand your organization's security goals and objectives for endpoint security, align and execute Microsoft recommended deployment baseline across your organization's device estate.

Eligible workloads

- Microsoft Defender for Endpoint (EPP + EDR)

Customer benefits

- Take the benefit of agentless and cloud powered deployment for Windows 10 devices.
- Take your security to a new level by going from alert to remediation in minutes – at scale.
- Real time visibility around software vulnerabilities and security misconfigurations.
- Seamless migration from existing EPP & EDR solution using MEM.
- Benefit from integrated sec ops with Microsoft 365 Defender.
- Discuss and review to embark on the end-to-end security journey with Invoke.

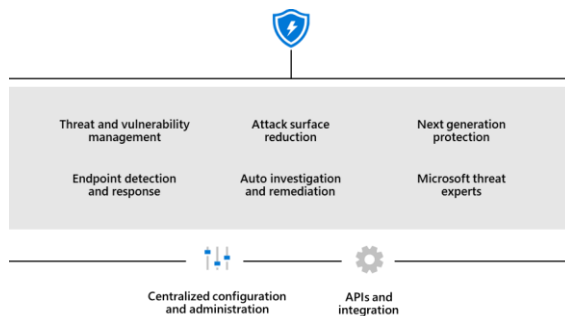

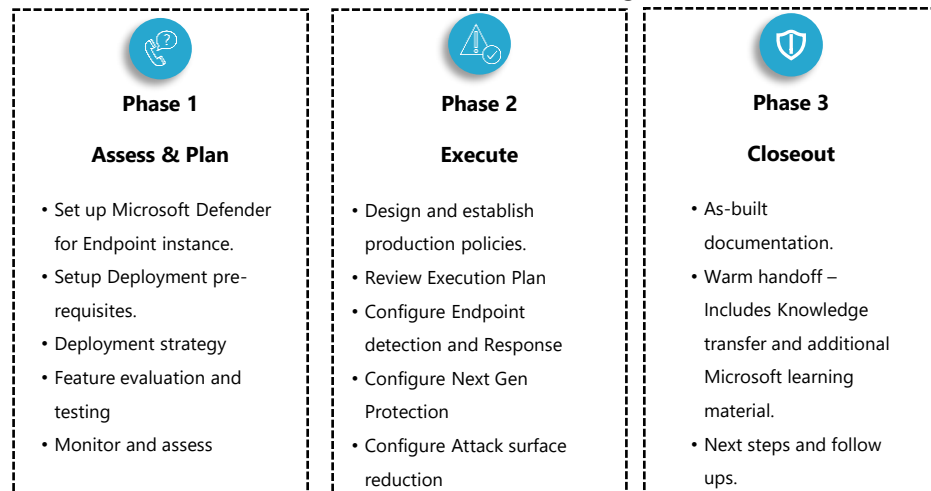

Planning workshop offer*

- *Microsoft funding for Invoke-led engagement may be available upon request.*

Invoke scope of delivery

- Invoke engineer will optionally monitor all these services remotely.
- Invoke will setup a M365 Demo Lab to help you explore features and functionalities, test new capabilities, understand new security enhancements, explore deployment options and evaluate infrastructure dependencies.
- Invoke engineer will carry out activities over Microsoft Teams call.

Timeline – Customer customizable agenda and timeline

- Industry-leading capabilities in MITRE ATT&CK evaluation and AV tests.
- Multi-platform support including iOS, Android, Linux, MacOS, and Windows.
- AI-based automatic investigation and remediation reduces threat volume.
