

Predicting potential, with AI for Education.

Antares AI for Education is an out-of-the-box AI solution for educators, school leaders, and dioceses, that not only monitors student performance, progress, and wellbeing, but also identifies and predicts when support, intervention and adjustment is needed to drive more personalised teaching and learning outcomes.

All educators know that there's never a one-size-fits-all in education. Individual students, as well as schools themselves, have their own unique needs.

- How do you measure success?
- How do you avoid siloed data?
- How do you gain insights on time?
- What drives good and bad behaviour?
- How do you best spend your time?
- What benchmarks do you use?

You might be able to answer some, or even all, of these questions. The problem starts when trying to find out the right answer for each student and school in your diocese — you'll need lots of data, which is usually spread across multiple systems and processes.

Even if you manage to collect it all, do you have the time and resources to analyse it?

The right reporting and analytics dashboard can transform the way your school operates.

10%
increase in the final
grade average in schools
that have implemented
personalised learning
[Educause]

Intelligent insights. Single platform.

Agile methodology. With AI to take you to the next level.

Our dashboard allows you to view all your student data and data from multiple schools all in one place. This lets you compare yourself against benchmarks such as NAPLAN or other schools, so you can monitor and predict the best way to improve, progress and reach your potential.

Benefits

Connect member school data and third-party data into a centralised platform

Track curriculum progress and the performance of member schools

Predict which schools require additional advice or support in which domains

Provide teachers with a 360° view of students and learning objectives

Out-of-the-box implementation for turn-key solution

How does it work?

Reporting & analytics dashboard

- Single source of truth for collaboration
- Intuitive user experience
 - Secure and SSO
- Scalable & cloud-enabled

Define

Integrate data to set objectives, define cohorts & programmes, and establish benchmarks.

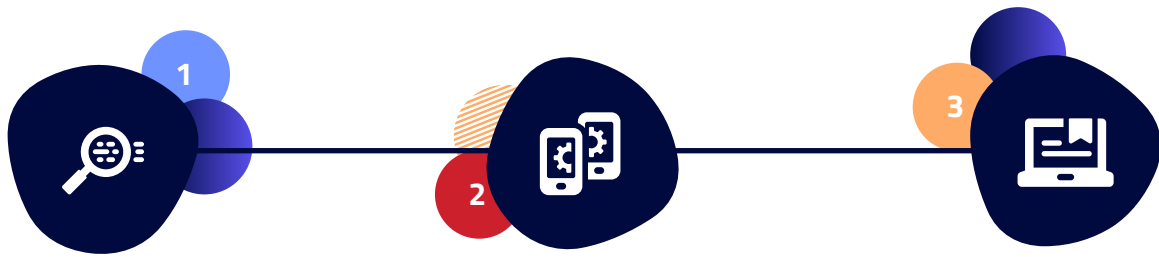

Analyse

Gain real-time oversight to monitor and track student progress.

Optimise

Surface intelligent insights to deliver personalised student outcomes.

Delivered with an agile methodology

Assess

Understand your academic goals and curriculum objectives, assess the IT estate and identify potential data sources.

Implement

Implement at speed avoiding unwanted disruption with access to change management service to ensure the solution embeds in your business.

Enhance

Provide ongoing data science expertise to perform deep dive analytics, uncover previously unknown correlations and new opportunities to improve learning and teaching outcomes.

Why Antares?

Industry credentials

15 years of experience in education across K-12 and higher education

Innovation drivers

First AI bot in education demonstrated by Microsoft's CEO

Built by educators, for educators

Strategic partnership with the Centre for Change and Complexity and Learning with the Uni of SA

Cloud Collective capabilities

Shared insights and capabilities from data scientists focused on education.

antares*

Provide truly personalised learning experiences and help your students and your school reach their potential with the power of data and AI.
