Gold Data Analytics  
Gold Windows & Devices  
Gold Data Center  
Gold Cloud Productivity

*Invoke-led Microsoft funding may be available upon request*

## Value Proposition

Azure Active Directory (AAD) facilitates over 450 billion secure authentications a month, not only for Microsoft 365 workloads, but in addition, 3<sup>rd</sup> party Software as a Service (SaaS) apps and on-premises applications. This engagement will culminate a high-level deployment plan for migrating from Okta to an AAD-centric SSO and Zero Trust Security experience for users in your enterprise.

## Customer Benefits

- Securely work anywhere, anytime, and on any device (Zero Trust)
- Single Sign On (SSO) across enterprise apps and services that exist on-premises or in the cloud
- Reduce operational overhead by moving away from 3<sup>rd</sup> party identity providers
- Apply granular risk-based controls on all applications (reduce VPN usage, AD FS and Okta attack surface)
- Better user experience and security from "Passwordless" authentication
- Maximize existing investments – You already own it!

## Invoke Scope of Delivery

- Identity and Access Management (IAM) Current State Assessment
- IAM Vision and Modernization Roadmap
- Okta application inventory and analysis
- Network Connectivity Guidance
- Remediate & Enable Proposal

## Migration Journey Framework
