How to Deploy SphereShied for SfB Ethical Wall?

This guide will help you with instructions on how to install, configure, and maintain SphereShield for SfB EW integration.

Instructions

Before installing

First, you will want to understand What are the different components of SphereShield for SfB and decide Where Should the SIP Filter Be Installed and if you need to install Bastion - the more common topology is installing the SIP Filter on the Edge, in order to prevent communication with some external partners.

After deciding, you will need to prepare the SIP Filter Software Requirements and Access Portal and Database Hosts Requirements (optional: DMZ Bastion Host Requirements)

Installation

When all the requirements are set and ready, you can start installing the SphereShield for SfB software. Reach out to our support to get the latest version of the SphereShield for SfB Package.
To install SphereShield for SfB EW you need to follow these steps:

1. Run the initial configuration of the Installer (you can skip Bastion, if not needed)
2. Run the installer on the Portal Server
3. Run the installer on the SfB Front End or SfB Edge

Configuration

After running the installation, you can start configuring the Ethical Wall.
