

Classify360 is a universal information engine spanning on-prem and cloud sources to provide content-level insight across the entire enterprise. Data is indexed behind the firewall, eliminating the risk and cost burden of creating a copy. Machine learning is leveraged to provide real-time insights into the characteristics of data, enabling and providing actionable workflows.

### DATA CLASSIFICATION

Content-level data insight

### RISK MITIGATION

Automated regulatory compliance

### CLOUD ACCELERATION

Secure cloud storage optimization

## UNIVERSAL CONNECTIVITY

- Scan data at a content level wherever it resides in the corporate network
- Manage and classify data in place, maintaining full control of your sensitive data
- Holistic view of normalized data across all unstructured data sources

Eliminate Data Silos

## INFORMATION ENGINE

- Classify one petabyte in weeks, not months
- Identify risk data and redundant, obsolete, and trivial (ROT) data
- Decrease data footprint and cost

Save Time & Budget, Mitigate Risk

## ACTIONABLE WORKFLOWS

- Encrypt, archive, delete, and tier data
- Maintain historical and ongoing compliance
- Enable repeatable, defensible actions

Maintain Ongoing Compliance
