bunnyshell

Company Overview

Bunnyshell is a DevOps platform as Service company, whose commercial grade solution enables developers to focus on creating great applications, instead of managing platform and infrastructure operations. With deep application expertise, open access to the platform, and world-class DevOps support, more than 1000+ companies across 77 countries trust Bunnyshell.

Bunnyshell manage the cloud for you

Bunnyshell Platform as a Service automates the configuration, deployment, scaling, monitoring, security, backup and ongoing maintenance of your applications in the cloud.

We don't just do DevOps, we automate them: with just one click, you can install the most common packages and apply production-ready configurations. You decrease the allocated time from days to just a few minutes.

Commercial grade: Bunnyshell provides a comprehensive solution that supports the entire application lifecycle. It delivers a rich set of capabilities including load balancing, autoscaling, backups and snapshots, cloning, high availability, database replication and more.

Open access: Bunnyshell enables you to manage your entire platform while retaining full control of the environment. This gives you the flexibility and transparency to make any modifications required for your applications.

VALUE OF THE BUNNYSHELL DEVOPS PLATFORM

- Increase agility and continuously improve applications
- Launch new projects faster without having to worry about DevOps, stack curation or development tools' maintenance
- Focus on innovation rather than systems and software stacks
- Reduce overhead and costs related to operations and support
- Retain complete control of application environments with customization options for configuration & deployment

BUNNYSHELL HIGHLIGHTS

- Web-based, self service PHP, ASP.NET, Java, Python, Ruby, Node.js Platform as a Service
- Optimized for diverse scalability needs across enterprises, SMBs and startups
- Highly configurable architecture allows for environment customization
- Dedicated tenancy model allows customers to own and operate instances including full administrative access
- Architected for reliability as applications run directly on infrastructure independent of our platform
