Data Governance

Microsoft Purview provides a unified view of an organization's data assets, making it easier to manage data more effectively. With automatic data classification and sensitivity labeling, organizations can more efficiently manage their data and avoid potential issues associated with non-compliance with data privacy rules.

Unlock your data's full potential with **Comprehensive Governance** and **Management**

Delivery **Method**

devoteam M Cloud

Phase 1
Discovery

Better data visibility and understanding

Key Activities

- Identify data sources across on-premises, multi-cloud, and SaaS-based environments.

Phase 2
Classification

Improved data organization and protection

Key Activities

- Classify data based on sensitivity, importance, and usage to understand the data estate.

Phase 3
Cataloging

Unified data catalog for collaboration

Key Activities

- Create a unified data catalog to serve as a single source of truth for data assets

Phase 4
Data Loss Prevention

Enhanced data security and compliance

Key Activities

- Implement DLP policies to prevent unauthorized access to sensitive data and ensure compliance with data privacy regulations

Phase 5
Governance

Clear processes for effective data management

Key Activities

- Establish procedures for managing data throughout its lifecycle, including data protection policies and monitoring data usage to maintain data integrity and security
