Application Innovation Accelerator with AKS/ Azure Arc

- Guided Setup of AKS or Azure Arc Enabled Cluster
- Application Containerization and Deployment
- CI/CD Integration

What is the Application Innovation Accelerator?

The Application Innovation Accelerator is a professional services package that will help you to containerize a target application, modernize its deployment workflow, and deploy it to AKS or any Azure Arc enabled cluster.

Our Approach

BoxBoat will provide the guided setup of a functional cloud native environment. We will help you to select, containerize, and deploy an appropriate application from your portfolio. Then we will help integrate GitHub Actions or your existing CI/CD tools and apply best practices to your build and deployment pipelines.

AKS Reference Architecture

technologies

Solution Highlights

Local Development

Increase developer efficiency by introducing Docker desktop and cloud-native tooling in local environments
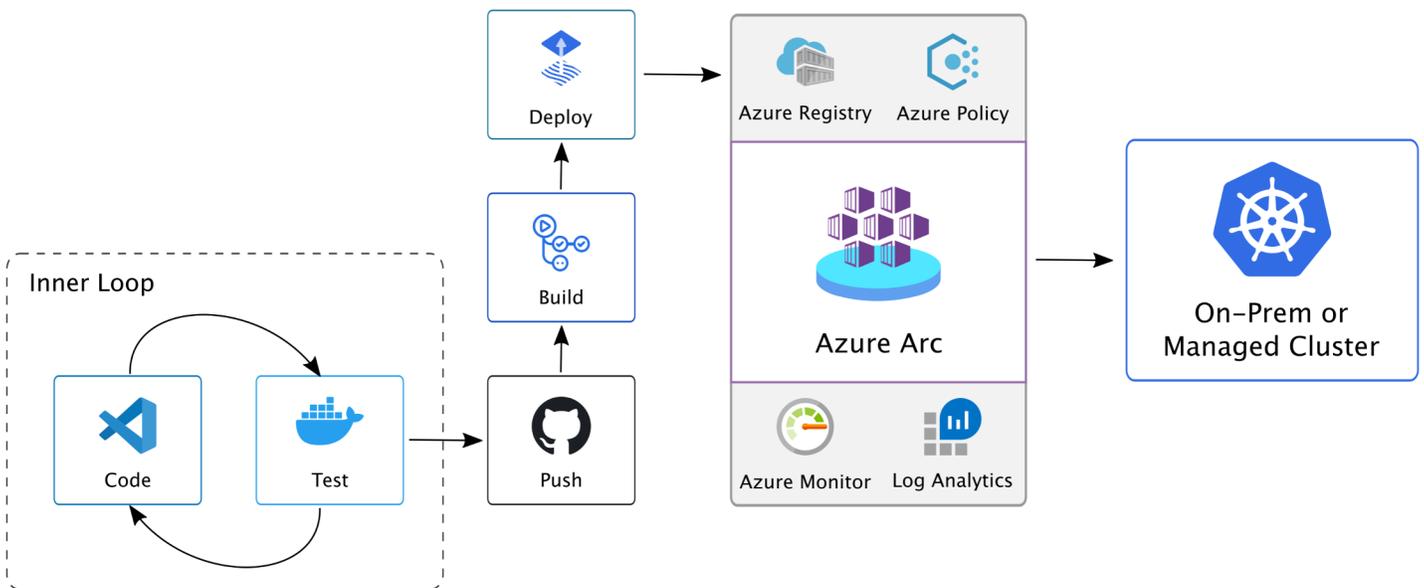

Deployment Automation

Establish a solid foundation for DevSecOps through automated integration and delivery using GitOps

Azure Best Practices

Adopt the new platform with confidence backed by Microsoft Azure and Industry best practices in the cloud-native space
