Windows Virtual Desktop (WVD) is a comprehensive desktop and app virtualization service running in the cloud that can be accessed by users utilizing any device they choose. WVD is less complicated than physical desktops when configuring and allows companies to easily deploy and scale virtualized Windows desktops and apps as needed. Users can access their anticipated desktop experience regardless of location, making WVD a natural next step in the evolution of digital transformation and remote working.

With SoftwareONE’s Windows Virtual Desktop Kick Start, we'll remove the complexity of getting started so you can deploy faster and focus on supporting your remote workforce.

**Discovery**
- Persona Identification
- AD disposition
- Integration requirements
- Productivity requirements
- Security and authentication
- Identity and access management
- Network assessment
- Telephony discussion
