Data Security for Cloud

HCL

HCLTech's Cloud Data Security services help customer address the challenges of their critical data security in a public cloud/ hybrid cloud environment by identifying the key elements and implementing the right security controls around the data thereby adhere to privacy and compliance requirements.

CHALLENGES

- Control of data and complete visibility in a public/ hybrid cloud
- Optimization of cost of security associated with critical/ non-critical data
- Adhering to regulatory and privacy compliance requirements when apps/ data migrated to cloud

IDEAL SOLUTION

- Right data classification
- Well-defined data security architecture
- Data governance, threat detection & prevention for data on cloud
- Right key management to prevent data loss

DESIRED OUTCOMES

- Complete visibility across data residency and data security requirements
- Meet global regulatory compliance requirements
- Enable customer in the entire data security lifecycle journey

HCLTech
Cloud Data Security

HCLTech's Cloud Data Security services help customer address the challenges of their critical data security in a public cloud/ hybrid cloud environment by identifying the key elements and implementing the right security controls around the data thereby adhere to privacy and compliance requirements.

HCLTech services encompasses across Advisory, Implementation & Operational services focusing on purposeful collection of data, controlled by data owner, visible to data subject and used responsibly by business owners.
