Data Warehouse: 1-day assessment

Do you find it more and more difficult to cover all scope of corporate information for proper planning?

Most probably, your data is stored in different databases and is hardly suitable for analysts, while your on-site servers are overloaded...

Awara IT supports companies with 1-day assessment that is intended to build a cloud or hybrid storage that will then help you to use your large amounts of data efficiently.

Intended for:

SMBs and large enterprises with large amounts of data.

The main target:

Provide an efficient data delivery to the end users from ERP, BI, SCADA or EPM.

Example

After the assessment we will plug a small online service in the middle of the existing data processing process.

E.g. between SQL and Power BI we will add Azure Analysis Services.

▶▶ Up to 60 times faster!

Your report will be updated in 10 seconds, not 10 minutes.

As a result of the assessment Awara IT will provide you with the next steps of the implementation and methodological recommendations and actions on how to process and store data correctly.

Deploying and building a storage requires deep understanding of your business challenges and excellent knowledge of Microsoft solutions.

Result

Storage for various data and fast and proper delivery of this data to a user.

Data sources

Processing and storage

Modelling

SQL

Visualization

Why you need 1-day Data Warehouse assessment:
- Interact with your data in a fast and efficient way on any level to achieve your targets.
- Get fast data processing
- Easily adapt your storage systems to changing architecture and business requests, with applying only minor changes.

Azure solutions:

Azure Synapse Analytics,

Azure CosmosDB,

Azure Data Factory,

Azure Data Share,

Azure Databricks

And many more.
