PowerBI Portal

Report sharing according to your needs.

Unlimited reports in a single place

PowerBI Portal offers an unlimited report sharing experience to anyone, regardless of being in your organization or even having a Power BI account. You can share an unlimited number of reports and dashboards in PowerBI Portal with an unlimited number of users.

Spend according to your needs

PowerBI Portal optimizes costs associated with hosting reports in the cloud. Unlike regular report sharing, you can set a limited refresh capacity for PowerBI Portal that automatically turns the service off when inactive. If activity is detected, PowerBI Portal becomes available again, ensuring that your company only spends what it strictly needs.

Secure and private

Power BI reports and dashboards in PowerBI Portal support two instances of row-level security to ensure that your company's data is only shared with trusted collaborators or clients. On top of these, you can apply individual custom filters to any report, so users only see data pertaining to them.

Visit powerbitiles.com/PBIPortal and try PowerBI Portal for free.
