

Functionality & Plans

Functionality

In Apps Analyzer for Microsoft Dynamics 365 Business Central is the solution that allows you to analyze in detail the objects of the system extensions for Dynamics 365 BC.

Since version 15 of #MSDyn365BC, there is no access to Object Designer. So seeing objects in a simple way seems more complex. Since in this version all applications are extensions, In Apps Analyzer allows you to analyze the extensions objects in the system.

The solution is fully integrated with Microsoft Dynamics 365 Business Central and is certified by AppSource, which ensures that it meets the strictest quality standards required by Microsoft.

With this solution you can check which objects each extension of the system uses, see if you have free gaps to use and if you have informed the ranges of your extensions, you can also see what objects you have free.

In addition, with the “Check ranges” tool, you can check if a range enters or may conflict with objects or ranges of other extensions.
