

EVENT MONITOR - EXPRESS

A LAPTOP SOLUTION FOR EVENT SECURITY

Event Monitor® - Express is a user-friendly solution meant for security teams responsible for safety and security of events.

This solution takes inspiration from the original Event Monitor software for major events security, but also borrows from Egidium's Tactic Plan, fast-to-use solution for managing emergency situations (notably used by France's famous GIGN).

Target Markets	References

CENTRAL TO EVENT SECURITY: OPERATIONAL COORDINATION

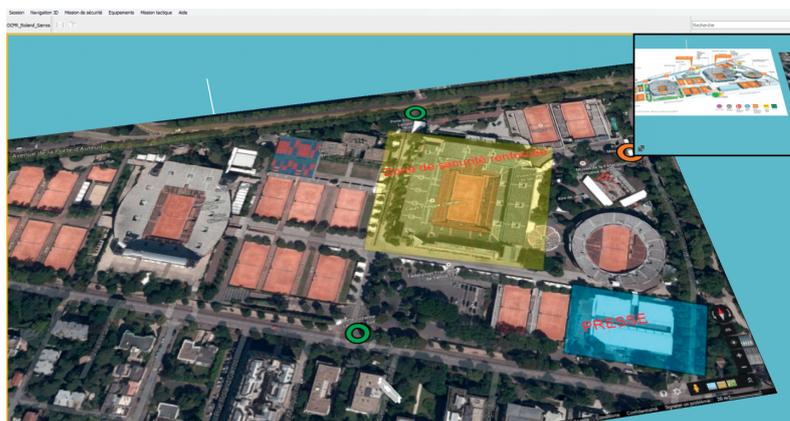

As event organizers pay close attention these days to security/safety organization methods and efficiency, Event Monitor – Express answers several needs:

- Managing operational coordination of the security scheme in a digital and visually-explicit way.
- Having an exhaustive time-stamped electronic logbook and easily shareable reporting.
- Upfront preparation of the security staff dispatch for every phase of the event, to be used as well as visual basis for the lessons-learned exercise after the event's end with all protagonists.
- The need for mobility and user-friendliness, thanks to a portable setup (laptop or tablet) which can be used offline and is easy to use in stress situations.
- A usage-based business model, suitable for event security.

THE EVENT MONITOR® – Express SOLUTION

Event Monitor – Express is an all-in-one solution for operational coordination managers, which includes situational awareness, security logbook and reporting.

The security scheme visualization on maps or pictures (positions of guards etc.) comes together with incident management (with associated procedures) and electronic logbook features offering complete traceability .

Event Monitor® – Express: graphical representation of security scheme

FEATURES

- Handling of maps, plans and photos
- Creation of multiple versions
- Graphical editor and symbols library
- Incidents and procedures management
- Electronic logbook
- Detailed reporting and statistics
- Archiving of organisation schemes

BENEFITS

- o Accurate situational awareness
- o Preparation of security plan for each phase of the event
- o Quick representation of guards' positions and organisational schemes
- o Decision support, efficiency in crisis mode
- o Complete traceability
- o Automatic sharing of information with the event organizer or authorities
- o Easier lessons-learned

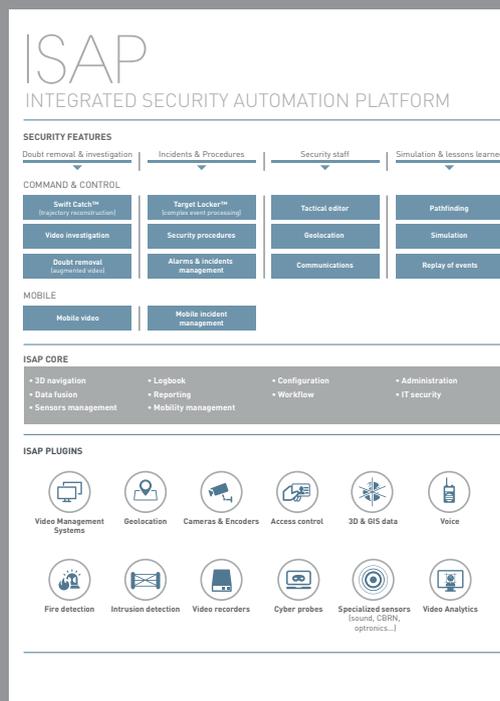

The solution is upgradable and may allow for instance to connect sensors (access control, counting, video...) or to synch with mobile devices held by on-site coordinators. It can allow situational awareness sharing on several computers or tablets as well.

The upgradability and addition of extra features may go all the way up to the functional richness of Event Monitor – Global, a solution used for instance for the Paris Air Show.

Event Monitor® – Express: use of several visuals simultaneously

Event Monitor leverages the ISAP software platform

Based on a big-data approach to security, ISAP merges data from every sensors and systems in real time via its plugins. With its 3D interface, ISAP acts as a true situational awareness engine.

Several vertical solutions leverage ISAP's rich set of features:

- Event Monitor® (event security)
- Smart Shield® (infrastructure protection)
- Tactic Plan® (emergency interventions)

Because security must be designed in a comprehensive manner, Egidium's solutions provide you with better command and control of your security systems in every dimension, so as to complete your mission successfully.
