Sii Cloud Sync

Increase value of your business decisions based on up-to-date data

In the current times many companies want to move their solutions and entire environments to the Cloud. This is a very crucial and time consuming effort to make sure all the data and processes are moved securely.

Sii Cloud Sync

Sii Cloud Sync addresses the situation where company owns one or more environments (Cloud, on-premise) and needs to share data and information between different applications. The tool is able to perform two-way data synchronization between Cloud (SharePoint Lists, Azure SQL) and on-premise (MS SQL) storage.

Why customers use Sii Cloud Sync

This at-a-glance box

- No hidden costs
- Based on latest technologies
- Scalable
- Easy to deploy and maintain

Simple

- Setting up a new synchronization if few easy steps
- No need to worry about the process – synchronization will be done automatically

Single proces can be set up in just 5 minutes!

Reliable

- Retrying any failed synchronizations
- Email notifications about the process
- Clean built-in log viewer

Number of failed synchronizations is close to none

Scalable

- No hard limit of synchronization processes
- No limit of source/target environments

Administer all synchronizations in one place

„Switching to Sii Cloud Sync helped us save significant costs of additional 3rd party licenses"

- Automotive Industry, Head of IT
