

FileWall™ for Exchange Online

Comprehensive ransomware & malware protection for Microsoft 365 email users; designed to complement ATP & EOP.

The Challenge – 94% of malware is delivered via email

According to recent research, spear phishing emails with malware attachments are the most common vector for deployment of Advanced Persistent Threat (APT) attacks. These meticulously crafted emails bait the user into opening attached files, with the understanding that the file will run inside the organization's network.

Since this widespread method of spreading malware is not new, most organizations have already implemented a secured email gateway as part of their attempts to block suspicious traffic. However, it is virtually impossible for such detection-based solutions to keep up with and detect the thousands of sophisticated malware variations that emerge daily. As a result, many organizations remain vulnerable to one of the most popular channels for attacks.

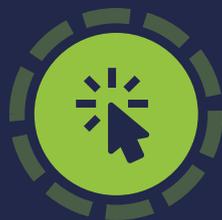

FileWall – The ultimate malware prevention solution for Microsoft 365 mailboxes

FileWall prevents malware infiltration to the organizational networks by disarming malicious code from email attachments. Uniquely, FileWall protects files from known and unknown future attacks – where legacy solutions fall short.

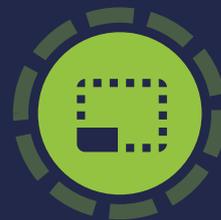

Patented Technology

FileWall is the first CDR native application within Microsoft 365, publicly available on Microsoft AppSource.

Click Deployment

FileWall can be directly purchased via the Microsoft AppSource with click service activation and zero onboarding.

Deep File Inspection

Leverages CDR technology and deep file inspection to all nested and embedded files to remove malicious content.

Starting with \$1 monthly

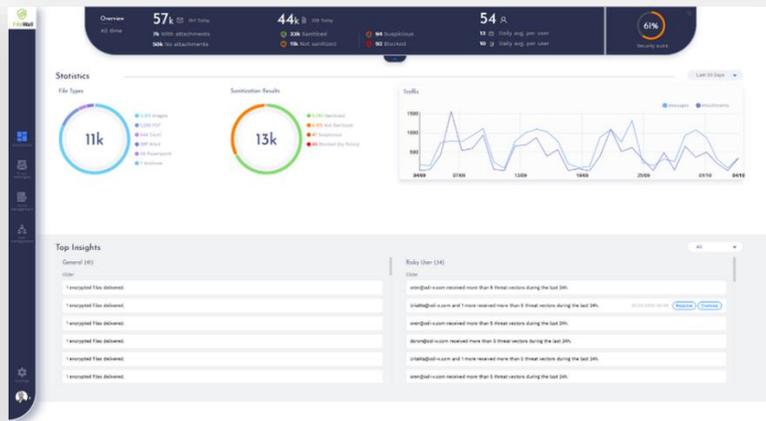

Provides military grade email attachment security at an affordable price for SMBs

FileWall Solution

FileWall is powered by odix's field-proven True Content Disarm and Reconstruction (TrueCDR™) core technology and offers new disruptive approach to cyber threats. This patented technology scans, disarms and rebuilds files into clean versions that can be safely used by users. odix TrueCDR™ technology removes both known and unknown malicious code from a wide range of file types, while encapsulating three functional phases within various security processes:

- Policy enforcement
- Smart TrueType check
- Content Disarm and Reconstructions

FileWall's comprehensive admin console enables overall visibility, insights, and management of its processes.

Users Reviews by Microsoft MVPs

odix highly appreciates the FileWall user's community feedback provides on Microsoft AppSource and other platforms. We are looking forward to expanding the FileWall cybersecurity coverage for hundreds of millions of users within the broader Microsoft 365 community.

It is the best for protection

FileWall helped us to resolve our email security issues. Although we used many security tools before but File Wall beats them all, it's the best to provide the required security to protect your business save your budget. The tool was able to achieve the highest level of satisfaction for both the IT employees and the company's employees

Mohamed Elsherif (October 2020)

Great security add-on for Exchange Online

FileWall is a great security add-on for Exchange online. It was super easy to configure it and the user/admin interface is super intuitive. It catches a number of attachments which passed through EOP without problems. In today's environments where a lot of malware is coming via email and users are opening all messages and clicking
