TABLE OF CONTENTS

1. DOCKER RECAP

- 1.1 Linux containers
- 1.2 Docker images and Dockerfile
- 1.3 Docker Compose
- 1.4 Common commands
- 1.5 Need for orchestration

Hands-On: Containerize the host ID app

2. INTRODUCTION

- 2.1 Introduction - origins of Kubernetes
- 2.2 Architecture and components
- 2.2 High availability

3. OBJECTS OVERVIEW

- 3.1 Common objects
- 3.2 Pod - the atom of Kubernetes
- 3.3 Pod lifecycle
- 3.4 ReplicationControllers - (ReplicaSet, Deployment, StatefulSet, DaemonSet)
- 3.5 Cluster management
- 3.6 API structure
- 3.7 API server parameters and request flow

Hands-On: Deploying host ID app on your cluster

4. ACCESSING SERVICES

4.1 Services and service types

4.2 Service endpoints and discovery in AKS

4.3 Ingress and ingress controllers

Hands-On: Expose the host ID app via NodePort and LoadBalancer

Hands-On: Create ingress and ingress controller, and access host ID by virtual host

5. CONFIGURATION INJECTION

5.1 ConfigMaps

5.2 Secrets

5.3 PodPresets

Hands-On: Configure host ID app to enable source IP logging

6. SOURCE IP & STICKINESS

6.1 Source IP with services

6.2 SessionAffinity and stickiness

Hands-On: Load balancing and stickiness

7. POD SCHEDULING

7.1 The kube-scheduler

7.2 Affinities / anti-affinities

7.3 Node selectors, taints and tolerations

Hand-On: Scheduling with resource settings and affinities

8. STORAGE PERSISTENCY & STATEFULSETS

8.1 Persistency and common options

8.2 Volumes

8.3 PersistentVolumes and Persistent Volumes Claims

8.4 Storage classes

8.5 StatefulSets

Hands-On: PV/PVC binding, StatefulSet Deployment

9. RESOURCE MANAGEMENT

- 9.1 Resource requests and limits
- 9.1 Measuring for optimal settings
- 9.2 Namespaces, quotas and LimitRanges
- 9.3 Keys for a stable cluster

10. MONITORING & AUTO-SCALE

- 10.1 Monitoring Kubernetes
 - 10.2 Monitoring stacks
 - 10.4 Pod autoscaling with HPAs
 - 10.5 Cluster autoscaler on AKS
 - 10.6 Scaling clusters in the cloud
- Hand-On:** Monitoring and autoscaling

11. LOGGING & AUDITING

- 11.1 Basics
- 11.2 Node and system components logging
- 11.3 Logging stacks
- 11.4 Auditing

12. SECURITY

- 12.1 Authentication
- 12.2 RBAC Authorization
- 12.3 Service accounts and tokens
- 12.4 Pod Security Policy
- 12.6 Kubernetes certificates and certificate authorities
- 12.7 Tools and add-ons for Kubernetes security

13. AKS and Kubernetes NETWORKING

- 13.1 Network models
- 13.2 Network plugins
- 13.3 CNI plugins
- 13.4 Overlay networking
- 13.5 Network policies

14. DEPLOYMENT STRATEGIES

- 14.1 Rolling updates and revisions
- 14.2 A/B Testing, blue/green and canary deployments

Hand-On: Rolling updates, revisions and rollbacks

15. HELM CHARTS

- 15.1 Charts as Kubernetes applications
- 15.2 How it works
- 15.2 Kubeapps

Hand-On: Create and deploy a chart for the host ID app

16. FEDERATED SERVICES

- 16.1 Introduction to Kubernetes and AKS
- 16.2 Architecture
- 16.3 Federated resources
- 16.4 The hybrid cloud point of view

Demo: Global federated service on GCP

17. CLUSTER MAINTENANCE

- 17.1 Deployment flavors and tools
- 17.2 Maintenance - cordoning, draining and PDBs
- 17.3 Cluster maintenance
- 17.4 Kubernetes operators

18. API & API EXTENSIBILITY

- 20.1 Kubernetes API structure
- 20.2 Admission controllers and admission webhooks
- 20.3 Custom resource definitions
- 20.4 API aggregation

19. SERVICE MESHES

- 18.1 What is a service mesh?
- 18.2 Introduction to Google RPC (GRPC) protocol
- 18.3 Introduction to Linkerd (Finagle) and Istio (Envoy) on AKS
- 18.4 AKS Use cases

Hand-On: Deployment strategies and distributed tracing with Google Istio

20. KUBERNETES & JENKINS

- 19.1 Jenkins Kubernetes plugin
- 19.2 Running slaves as pods
- 19.3 Jenkins pipeline DSL for Kubernetes features

Hand-On: Create a CI/CD pipeline with pod slaves on Kubernetes

ABOUT THIS COURSE

This course is intended to introduce Kubernetes to a mixed audience comprised of DevOps, Dev and IT teams, while leaning more to the Dev/DevOps.

HANDS ON IN THE COURSE

Every '**Hands On**' item in the syllabus indicates an exercise in which the participant will put into practice the topics discussed over their own Kubernetes/AKS cluster. A hands-on lab paper will be delivered separately, with instructions for each lab.
