

Joiner Mover Leaver Automation

Take the hard work out of managing access for employees, new and old.

Package Highlights

Automation of a process frequently open to human error.

Bespoke JML process tailored to your organization's needs.

Cloud-first approach, using Azure provisioning agents.

Implementation of MIM for streamlined identity management.

Reduction of manual effort, errors, and both financial and time costs.

“This project alone saved us so much time. Having JML happen immediately and automatically freed up our IT staff to concentrate on higher value work.”

–Dr Ian Dawson, Head of IT at the Fashion Retail Academy

More organisations are becoming aware that identities are the control plane of data and resources.

Automating an organisation's joiner/mover/leaver (JML) processes, then, will play a key role in securing data, ensuring integrity, and reducing manual effort, errors, and cost.

The Joiner Mover Leaver Automation package from Identity Experts makes this possible through the implementation of top-tier Microsoft technologies.

By introducing solutions such as Microsoft Identity Manager (MIM) and using a cloud-first approach, this package can ensure organisations maximise the potential of automation, whilst minimising risk – and simultaneously making incredible time and cost savings.

Who is This Package For?

Organisations looking to reduce manual intervention, improve efficiency, and improve data standards in HR will benefit greatly from this package. Automation of the process also helps with the meeting of audit requirements, ensuring that access to resources is not available to former employees.

Package Objectives

- ✓ Automate the creation and updating of user accounts with birth right access to required resources
- ✓ Complete the lifecycle by ensuring that user accounts and resource access is deactivated when the user leaves the organisation.
- ✓ Deliver an automated JML process using MIM, including emergency enable/disable functions, emails to line managers to alert of the creation/disablement of user accounts, documentation

What We'll Do

A solution architect will design an automated JML process tailored to an organisation's business requirements.

For a cloud-first approach, Azure provisioning agents such as Workday or SuccessFactors will be integrated.

Still require on-premise Active Directory? Our hybrid designs aim for future-ready, adaptable processes using Azure hybrid provisioning, Azure AD Connect, and Microsoft Identity Manager (MIM) for an efficient and streamlined identity management solution.

What Will the Outcomes Be?

- ✓ A hybrid identity management solution
- ✓ An identity platform foundation to build upon for attestation to manually resources
- ✓ Automation, creation, and updating of user accounts with birth right access to required resources

A Little About Us

Identity Experts is a distinguished, UK-based Microsoft Gold Partner, focused on identity access management (IAM) and security.

Since 2014, our passionate team of experts has worked alongside organisations to provide a holistic approach to their technological needs, backed by experience and ever-expanding knowledge, and our partner relationships.

Together, we help to ensure our customers' security, create savings on resources such as time and cost, and underpin further organisational transformation.

With direct links into Microsoft's product engineering teams, we're able to provide best-in-class implementation services, influence product roadmaps, and represent Microsoft Consulting Services and the Microsoft FastTrack team.
