

Cloud-based Business Process Management platform that enables organisations to rapidly build and manage workflow solutions and business apps for their digital transformation needs

WHAT OUR CUSTOMERS ARE SAYING

"We help our customers meet the challenge of operating in a complex multi-channel, on-demand world where client experience is increasingly paramount as a business differentiator. Having Straatos BPM Platform in our existing offerings of IT services and solutions bring us closer to our core vision statement. That is to be "the go-to advisor" for our customers' technical solutions and service needs."

Rosalynne Lee
Founder and Director, Rabbit IT Sdn Bhd. (Asia)

WHAT WE OFFER

Enhanced your customer's experience
Engage customers with social, mobile, web, and cloud technologies. Straatos multi-channel infrastructure enables organisations to collect documents and data, transform them into accurate, actionable information.

Visually intuitive process designer
Design and modify business process models in BPMN 2.0 standard with an easy-to-use graphical designer. Each BPMN element (flow object, connecting object, swimlane, and artifact) is represented by a shape. Simply drag and drop these shapes into the diagram that best describes how data, activities, decisions, and resources are associated.

Low-code process automation
Automate repetitive tasks and activities with minimal coding effort. Create, test, and deploy these low-code data configurable, or API scripts that automate any business process in minutes.

Real time process data insights
Straatos Process Monitor provides real-time insights of content and process data to analyze and identify process bottlenecks. Discover and address critical process issues, if unchecked, would lead to operational issues or missed opportunities.
