

AZURE DOMAIN CONTROLLER IMPLEMENTATION

GET STARTED IN MICROSOFT AZURE

BUILD A SOLID FOUNDATION FOR YOUR CLOUD PRACTICE.

We can help your business leverage the power of Azure by implementing a Domain Controller for authentication.

This architecture will serve as a foundation for your cloud practice, allowing you to migrate additional services as your cloud strategy develops. We will

- ✓ Build and configure two Azure Virtual Machines.
- ✓ Create an Active Directory Site in Azure to represent virtual services and resources.
- ✓ Build two virtual servers with Microsoft Active Directory Domain Services (AD DS).

TRUST PEI TO GET YOU THERE.

PEI is a Microsoft Gold Cloud Platform and Microsoft Gold Datacenter Partner.

We partner with our clients to understand their needs and objectives and assist them in making decisions that help them achieve their business goals.
