AZURE DOMAIN CONTROLLER
IMPLEMENTATION

PEI

GET STARTED IN
MICROSOFT AZURE

BUILD A SOLID FOUNDATION
FOR YOUR CLOUD PRACTICE.

We can help your business leverage the power of Azure by setting up cloud network connectivity and implementing a Domain Controller for authentication.

This architecture will serve as a foundation for your cloud practice, allowing you to migrate additional services as your cloud strategy develops. We will

- ✓ Build and validate a Microsoft Azure tenant and connect it to your main datacenter.

- ✓ Integrate Azure IaaS to provide a cloud-based virtual infrastructure.

- ✓ Install and configure an Azure Active Directory Site and Domain Controller.

TRUST PEI
TO GET YOU THERE.

PEI is a Microsoft Gold Cloud Platform and Microsoft Gold Datacenter Partner.

We partner with our clients to understand their needs and objectives and assist them in making decisions that help them achieve their business goals.

ADD REDUNDANCY
TO YOUR ACTIVE DIRECTORY

Domain Services to maximize uptime and increase the reliability of your Active Directory service delivery.

CREATE A DISASTER RECOVERY
POINT FOR ACTIVE DIRECTORY

infrastructure to provide a base for your disaster recovery plan and ensure users can always access resources.
