

# Microsoft Teams GOVERNANCE THROUGH AUTOMATION

Enhance the Security, Oversight and Control of Your Teams Environment

**As organizations increase their reliance on the use of Microsoft Teams, the question of governance has become a hot topic.**

Powerful Teams collaboration tools including instant messaging and chats, video calls, file sharing, real-time document editing, and tools and apps integration have become pervasive in many organizations. This growing adoption has driven the need for enhanced security and control.

Creating a Teams site can impact the directory structure and other elements of your IT infrastructure. Preventing “Teams sprawl” through the creation of unnecessary Teams sites is also a growing concern. To get a handle on these issues, it’s important to ensure consistency and maintain control of your Teams environment.

Teams Governance through Automation helps you streamline the oversight of your Teams environment. You can optimize your governance workflow process by automating time-consuming manual tasks like approving new sites, collecting data on unused sites, ensuring consistent naming conventions, uncovering governance violations, creating reports, and assigning tasks related to your governance program.
