A comprehensive Fleet Management Solution

ABOUT Fleet Management

Fleet Management is comprehensive Fleet operations management solution built inside Microsoft dynamics 365, which enables organisations to effectively manage and control their fleets through providing end-to-end visibility of their operations.

What we Offer

The solution has One common dataset of all mobile and fixed fleet related asset types and their related characteristics, that can be linked to geographical locations and regions so that routes and individual trips can be predefined and managed

The individual vehicles are broken down into their various components, like horse and trailers, tyres, engine, load capacity, etc. So the solution not only caters for management of specific vehicles but their various components as well.

The solution has full maintenance functionality including preventative, corrective, predictive and condition-based maintenance across all fleet assets and vehicles, as well as loan and client equipment

Record and track warranties against specific vehicles, whether they are based on a calendar time period or on equipment usage. Then manage any warranty claims related to repairs or maintenance. Store and track any related permits as well and know when those permits need to be renewed

Fleet Management
by Fusion the Apps People

What it can be used for:

A view of your fleet

The centralised recording and management within the solutions means a user can manage all aspects of your fleet, from fuel usage, licence renewals and traffic offences, toll fees, vehicle service schedules and much more

Managing vehicles

A user can access the specific vehicle record and drill down to the various components that make up that vehicle and manage them as a unit or as individual components like trailers, tyres, engines etc.
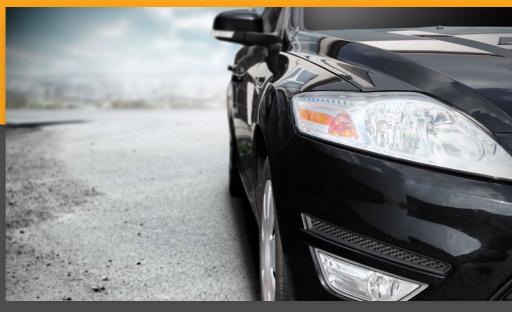

Plan and Manage Maintenance

Fleet maintenance managers can plan and schedule maintenance tasks using predefined templates and based on either calendar or mileage. This includes management of service teams , giving them full visibility on operations

Save by claiming on Warranties

Because the warranty information is stored against the related vehicle or component record, if it is valid, a user is prompted to claim against that warranty, thus saving the company unnecessary maintenance expenses

fusion
the apps people

Fusion the Apps People is an Independent Software Vendor (ISV) that forms part of the SIS Global Group. Fusion offers industry-specific solutions by extending existing business applications and functionality.
