Microsoft Apprenticeship Blueprint
For further and higher education providers

Microsoft Apprenticeship Network
Introduction

For colleges and universities who are designing apprenticeship programmes based on the new Digital Apprenticeship Standards – these Blueprints are a huge benefit. As a quick reference, they provide an easy way to see which Microsoft curriculum and certifications are relevant and how they map to the knowledge and skills of a Digital Apprenticeship Standard. You’ll be able to use the Blueprints to develop high quality programmes that employers are looking for to grow their own Microsoft talent and close the digital skills gap.
Standards

01 Information Communication Technician Level 3

Currently this apprenticeship standard is in preview and is waiting for funding band sign off.

This is a new Standard. It was created as part of the Digital Route Review to replace Infrastructure Technician Level 3. It is the one of the most popular Digital Standards and is a great entry point in the world of digital careers.

Use the Microsoft Apprentice Blueprint to help you create your Level 3 Information Communication Technician Apprenticeship Programme. The mapped training gives you access to understand the valuable training to deliver the skills that employers need.
02

Software Developer
Level 4

The Software Developer job role is one of the most in demand job roles currently. You will find this job role in many different sectors from fashion to retail, financial services and media.

Use the Microsoft Apprentice Blueprint to help you create your Level 4 Software Developer Apprenticeship Programme. The mapped training gives you access to understand the valuable training to deliver the skills that employers need.
Data is becoming an ever more important part of lives and business. Every sector is seeing a rise in demand in the skills needed to manipulate, visualise and gain insights from their data. As an entry level apprenticeship, the Level 3 Data Technician standard is a great stepping stone to creating a career in data and AI. They will develop vital skills for employers as we move in the new world of work.

The broad purpose of this role is to source, format and present data securely in a relevant way for analysis using basic methods; to communicate outcomes appropriate to the audience and analyse structured and unstructured data to support business outcomes.

The broad purpose of a DevOps Engineer is to enable organisations to get valuable working software in front of active users - both external and internal - frequently and safely, reducing time to market, delivering increased value and improving the quality of digital services. At its simplest, DevOps is a philosophy and way of working that brings together two historically disparate parts of the IT organisation, namely those who develop the software and those who are then required to support it in the live environment. The DevOps Engineer encapsulates both disciplines, requiring the individual to understand and appreciate how their code functions when being used in the real world and troubleshoot any issues that may arise, while taking a cloud infrastructure focused perspective.

This apprenticeship standard is to discover and devise new data-driven AI solutions to automate and optimise business processes and to support, augment and enhance human decision-making. AI Data Specialists carry out applied research to create innovative data-driven AI solutions to business problems within the constraints of a specific business context. They work with datasets that are too large, too complex, too varied or too fast that render traditional approaches and techniques unsuitable or unfeasible.

AI Data Specialists champion AI and its applications within their organisation and promote adoption of novel tools and technologies, informed by current data governance frameworks and ethical best practices.

Digital Support Technician
Level 3

This occupation is found in organisations, large and small, in all sectors, and within public, private and voluntary organisations. Organisations of all types are increasing applying digital technologies across their business functions to maximise productivity. The demand for people who can support and implement these digital operations and digital transformation projects is increasing. Similarly, organisations of all types are increasingly supporting their service users through online and digital channels, as they develop omni-channel approaches to meeting customer needs, deflect traditional telephone and face-to-face contacts and to reduce costs.
A Software Development Technician typically works as part of a software development team and builds simple software components (whether web, mobile or desktop applications) to be used by other members of the team as part of larger software development projects. They will interpret simple design requirements for discrete components of the project under supervision. The approach will typically include implementing code, which other team members have developed, to produce the required component. The Software Development Technician will also be engaged in testing that the specific component meets its intended functionality.

IT Solutions Technicians develop, implement and maintain complete IT solutions, including their hardware infrastructure (such as servers and networks) and software (such as operating systems, middleware and applications). They work as part of a multi-disciplinary team. Many such teams will be modern ‘DevOps’ style teams, which carry out the full set of stages across the whole solution lifecycle: requirements gathering, solution development, testing, implementation and ongoing support. In more traditional organisations the team is likely to be focused more at one or other end of this broad set of activities. Such teams may well be in transition to a modern ‘DevOps’ style team.
