# Data platform implementation plan.

# Contents

- Page 3. Practical info about real estate data
- Page 5. Implementation process
- Page 11. Roles, involvement, and responsibilities
- Page 14. Customer preparation
- Page 16. Implementation timeline
- Page 18. Contact

The background features a dark, charcoal-colored field with a series of overlapping, nested geometric shapes. These shapes are composed of thin, bright orange lines, creating a sense of depth and movement. The shapes are primarily rectangular and trapezoidal, arranged in a way that suggests a perspective or a layered structure. The overall aesthetic is modern and minimalist.

Practical info about  
real estate **data.**

There are four key data domains that create the foundation of a real estate company's data platform. These are important to get **\*\*right\*\*** before other domains are implemented.

Some property management systems have all of these domains while others only have the first three, which is why accounting systems are important to integrate after the PMS

The background features a dark, almost black, field with a series of overlapping, nested, and slightly offset orange lines. These lines form a complex, geometric pattern that resembles a stylized, multi-layered arrow or a series of interlocking shapes, creating a sense of depth and movement. The lines are thin and bright, contrasting sharply with the dark background.

# Implementation Process.

STEP 1

Spend half a day together

---

# Onboarding

---

INTRODUCTION  
WORKSHOP

Description of platform  
Understanding of strategy  
Walkthrough of databases

STEP 2

4 weeks

---

# Technical Integration

---

INTEGRATION OF  
SYSTEMS

Connect to databases  
Data integration  
Testing and quality assurance

STEP 3

4 to 8 weeks

---

# Business Integration

---

REPORT PRODUCTION  
AND TRAINING

Report production  
Report validation  
User adoption and training

## STEP 1

Spend half a day together

---

# Onboarding

---

## INTRODUCTION WORKSHOP

Description of platform  
Understanding of strategy  
Walkthrough of databases

## PARTICIPANTS

- Core business team overseeing implementation
- Data system expert(s)

## TO DO

1. Intrava explain process
2. Intrava introduce support system
3. Business team explain information used from respective systems for reporting
4. Data system experts walk through data systems (e.g., Yardi, QuickBooks) and show how they generate reports
5. If needed, customer introduce Intrava to technical contact from data system vendor(s)

## STEP 2

4 weeks

---

# Technical Integration

---

## INTEGRATION OF SYSTEMS

Connect to databases  
Data integration  
Testing and quality assurance

## PARTICIPANTS

- Data system expert(s) from customer
- If needed, technical resource from data system vendor (minimal involvement required)

## TO DO

1. Intrava gets access to databases
2. Intrava starts setting up db connectors
3. Sporadically communicate with **participants** to navigate integration. This will not consume a lot of hours. It is more of a sporadic Q&A process

STEP 3

4 to 8 weeks

---

# Business Integration

---

REPORT PRODUCTION  
AND TRAINING

Report production  
Report validation  
User adoption and training

PARTICIPANTS

- Core business team overseeing project
- Data system expert(s)
- Department champions

TO DO

1. Business integration kick-off meeting
  - Core business team and Intrava prioritize dashboard and report development
  - Agree on sprints and feedback sessions
  - Intrava release basic reports/lists to validate data quality and interpretation
2. Core business team and department champions audit reports and provide feedback
3. Schedule sporadic training sessions

## BUSINESS AS USUAL

Perpetuity

---

# Post Setup

---

## ONGOING SUPPORT

Monthly status calls  
Sporadic training and support  
Call, Slack, or email us

## COLLABORATION

- Intrava administrates platform
- Business users send requests via support
- Monthly status calls with internal champions
- Sporadic training and support

From this point on the system will naturally evolve through collaboration. We are your data department and welcome new report challenges and ideas.

When you want to integrate new systems we will go through the same process, though it will likely be quicker.

The image features a dark, charcoal-colored background. On the left side, there is a complex, abstract geometric pattern composed of multiple overlapping, nested lines in a vibrant orange-red hue. These lines form a series of interlocking, angular shapes that resemble a stylized, multi-layered arrow or a series of nested chevrons pointing towards the right. The lines vary in thickness and orientation, creating a sense of depth and movement.

Roles, involvement,  
and **responsibilities.**

## INTRAVA RESPONSIBILITIES

### Data engineers

- Setup database connectors
- Populate and modify data warehouse
- Program business rules
- Monitor, administrate, and improve data platform

### Report developers

- Communicate with end-users
- Develop reports
- Quality control reports
- Relay data changes to data engineers
- Training

## CUSTOMER RESPONSIBILITIES

### Core business team

- Prioritize databases to be integrated
- Prioritize reporting needs with department champions
- Quality control reports (*always be critical of the data*)

### Database expert(s)

- Help data engineers navigate database(s) during setup
- Facilitate contact between data engineers and database vendor(s)

### Department champions

- Quality control reports (*always be critical of the data*)
- Provide feedback on reports
- Collect and prioritize reporting needs for respective department

### End-users (rest of org.)

- Quality control reports (*always be critical of the data*)
- Communicate report needs to department champions
- Submit questions and comments to [support portal](#) or send to [support@intrava.io](mailto:support@intrava.io)

# Customer Preparation.

# » intrava

## STAKEHOLDERS

- Identify core business team
- Identify data system expert(s)
- Identify department champions

## DATA SYSTEMS

- Discover database connection options (direct access is preferred over APIs)
- Facilitate database access (often requires vendor involvement)

1	0		
1	0	1	0
0	1	0	1
0	1		

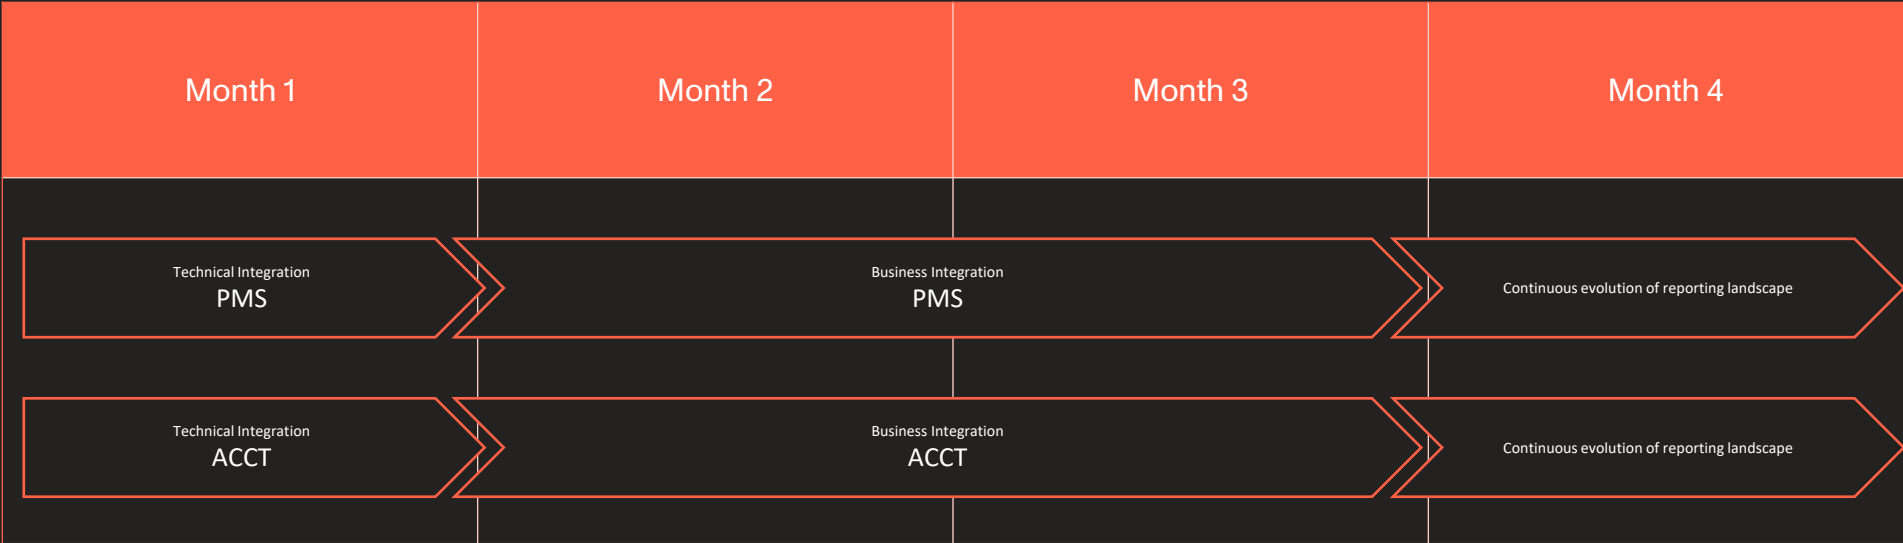

## DATA

- Share core business reports
- Define key performance indicators

# Implementation Timeline.
