Azure VM and Infrastructure Administration

Install — Configure — Setup — Troubleshoot — Secure — Audit — Automate — Manage Identity & Access

Short Project Azure Administration — **$350**

A Quick and Easy Way to Implement Your Short Azure Projects

While companies may come to the cloud platform such as Azure for various reasons, such as reliability, scalability, and its ever-growing tools and services, they underestimate the cost and skilled effort of operating in the Cloud. Remember that someone in the team is still responsible for administration, configuring, patching, backups, regular maintenance, and troubleshooting unexpected issues. While companies may prefer to keep most work in-house, they may occasionally need to tap into outside resources such as an Azure CSP like Apps4Rent.

A friction-free Short Project Azure Administration plan starting at $350 from Apps4Rent allows companies to get expert help they need when they need it. The plan includes 5 hours of Azure and server administration help, which can be used to implement short projects that may be unnecessarily delaying the success of Azure implementations. Overage hours are billed at $75/hour.

Apps4Rent, a Tier 1 Azure and Office 365 CSP boasts a large team of server and cloud infrastructure administrators, which has provided Cloud hosting for Windows and Linux applications and infrastructure to more than 10,000 companies in over 90 countries since 2003. To take advantage of our vast expertise, just purchase our 2-hour Quick-Fix Plan and get started right away. We are available 24/7 via phone, chat, and email.

If you have questions on any kind of server administration on Azure, feel free to contact us right away!

Which tasks can be performed under the 5-hour Azure administration plan?

- Patch updates
- Health checks
- Backup management
- Troubleshooting and optimization
- Third-party software installation
- Database management
- Desktop management
- Failover management
- Alert monitoring
- Review error logs
- Review server logs
