

Managed Services for Microsoft Azure

Reap the full benefits of Microsoft Azure, unlock value from IT investments and manage costs, governance and risks.

Benefits

- Accelerate your move to consumption-based IT as a service
- Actively manage costs and reduce public cloud sprawl
- Improve cloud architecture, governance and ongoing support
- Access end-to-end Azure services — advisory, cloud migration, managed services and security

DXC in the Microsoft Cloud

- 20,000 Microsoft professionals and 12,000 ITIL certifications
- Microsoft Azure preferred partner, Microsoft Gold Certified Partner, cloud solution provider (CSP) and managed services provider (MSP)
- Support for more than one million Microsoft SharePoint users
- Global Microsoft licensing solution provider
- Microsoft's No. 1 Office 365 and Enterprise Mobility and Security (EMS) partner
- Microsoft's Productivity Partner of the Year in 2017

Demands on IT for increased speed and lower costs are fueling a rush to the public cloud. Poor oversight of this decentralized environment often leads to overprovisioning of cloud services, wasteful and unplanned spending, and disappointing service levels.

For many enterprises, it's nearly impossible to understand the true scale of costs or compare actual consumption to the services provisioned. Greater visibility and better governance of these growing cloud portfolios are needed.

Full support for Microsoft Azure

DXC Technology's Managed Services for Microsoft Azure provide design, delivery and daily operational support of compute, storage and virtual network infrastructure in Azure. We monitor and manage system software, infrastructure configurations and service consumption using proven processes and tools. In addition, our financial and governance services help reduce uncontrolled consumption.

Azure and DXC's managed services scale up and down to continually meet your changing business needs, ensuring that your IT costs and services will always align to business demand.

DXC helps you realize the full financial and operational benefits of Azure through end-to-end services. These include advisory services to identify workloads suited to migration to the cloud, and transformation and cloud migration services to take the risk out of moving core applications with complex enterprise workloads.

We offer managed service bundles suited to meet client IT and financial objectives. Whether you have critical workloads that demand a full suite of services or you're just looking for a light-touch service to control costs, we can scale and align to meet your needs.

DXC is uniquely positioned to support Azure. We're a premier Microsoft partner with a global presence. Our seasoned expert advisors, specialized tools and services for risk mitigation, security and regulatory compliance can help you achieve savings while reducing enterprise risk.

Proven success with Azure

Our Managed Services for Microsoft Azure are helping clients easily consume Azure services and benefit from flexible consumption-based models, such as infrastructure as a service and platform as a service. In addition to managing costs, these firms are benefiting from agile development and deployment of cloud-native applications.

Our clients include:

- A global facilities management firm that increased flexibility with Azure to provide project office deployments quickly, anywhere around the world
- A leading manufacturer that used DXC's advisory services to assess workloads for migration, control costs and reduce risk exposure
- A global retailer that migrated from traditional IT to Azure to reduce capital costs and drive value with a fully consumption-based model

Multiple service options

DXC offers advisory services and two bundles of managed services:

Advisory Services — Quickly assess your current state:

- Analyze an existing Azure environment to align to security, compliance, flexibility and scalability needs
- Ensure that the Azure architecture is optimized for the workloads expected
- Make architecture changes as needed

Silver Service Bundle — Manage your own Azure environment with access to skilled resources and tools:

- Azure financial analysis, management and reporting, and financial best practices
- DXC account services, including governance and collaboration
- Light-touch service management engagement with DXC service management experts on request
- Service costs that scale with your need

Gold Service Bundle — Get all the features of the Silver Service Bundle, plus full managed services:

- Infrastructure configuration
 - Integrated IT service management of workflow, automation and governance
 - Management of virtual machines, storage and guest OS, including patching and availability management
 - Security management, including active directory, firewall, traffic manager, virtual network, antivirus and backup/restore
 - Service costs that scale with client need

Our service bundles are designed to align to workload needs. For example, a full-scale managed service may not be needed for development or test workloads. Our services bring best practices and governance to the public cloud so you can be confident in moving the most critical workloads to the cloud, deriving the value and agility you expect.

Our approach to Azure is as nontraditional as the cloud itself. Traditional silos for storage, compute and networking are replaced with a fully skilled, end-to-end “CloudOps” delivery capability. We recognize that cloud, compute, storage, virtual networking and security are a set of integrated processes.

Leading Microsoft partner

DXC Managed Services for Microsoft Azure are built on our 30-year global strategic partnership with Microsoft. DXC is Microsoft's largest IT services partner globally. We're recognized internationally as a key Microsoft partner; in fact, DXC Technology was named Microsoft's Productivity Partner of the Year in 2017. DXC supports Microsoft's mission to empower every person and organization on the planet to do more and achieve more.

DXC helps clients in all regions and industries unlock value in their IT investments and take full advantage of the digital economy. We're one of the world's few IT services companies that can cost-effectively integrate public cloud, private and virtual private cloud, and on-premises computing into an effective whole. Let DXC experts advise you on bringing cost transparency, governance and operational excellence to the public cloud.
