

Data Governance QuickStart

Imagine a world where data ceases to be a constant source of frustration and is instead an asset that is used to transform your business.

Is your data holding your business back?

Is your data causing you the problems that you thought it would solve? Do your employees see data as a by-product of a business process, rather than something that should be improving your business processes? Or does it feel like your data is managing you?

These symptoms are not uncommon and are usually a sign of data governance problems. A result of people, processes, and technology trying to play catch up with data that proliferates at an even faster rate.

Data governance can seem overwhelming, but starting small and with the end in mind, you can move your organisation in the right direction. Get a handle on your data today and start the first steps to become a data-driven organisation where data not only meets your organisational objectives but drives business.

What does good look like?

Good Data Governance needs to address seven key questions.

Why?

What is the business context of this data and why are we keeping it?

Where?

Where is the data stored?

What?

What does this data look like?

How?

How is this data stored?

When?

When was this data created and how long should it be kept for?

Who?

Who created this data and who is responsible for it?

How much data?

What is the volume of this data?

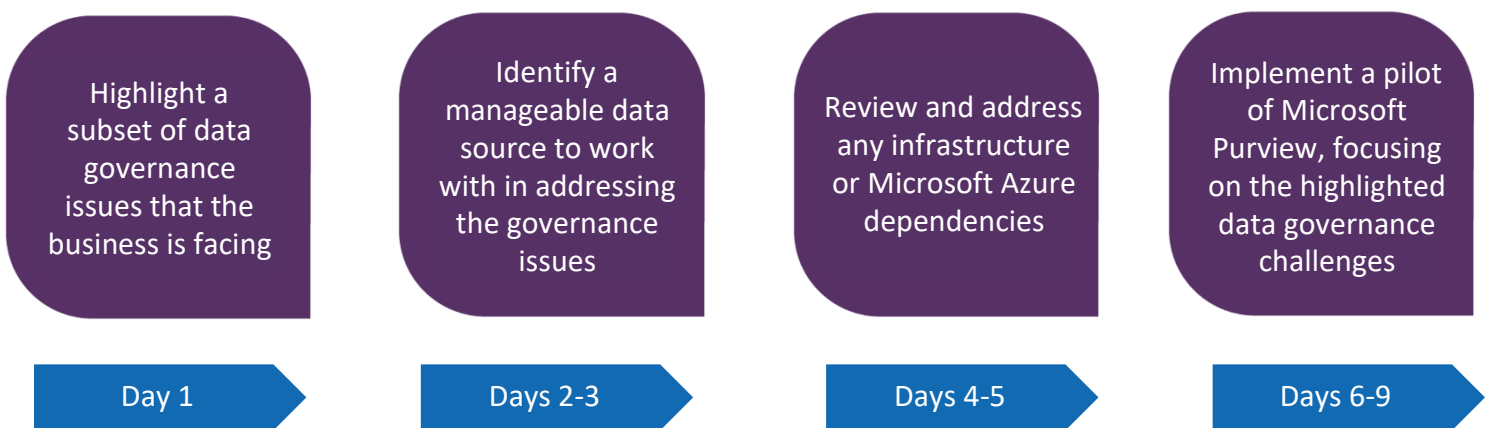

Benefits of good data governance

- Improved control and risk management
- Improved efficiency in information delivery
- Increased trust in information and data
- Increased understanding of your information and data
- Driving data integrity back to source systems
- Improved information management planning
- Elimination of duplicate effort
- Reduction in information delivery costs
- Improved speed of access to information

The Adatis Data Governance QuickStart with Microsoft Purview

Data governance can be complex and overwhelming, and many organisations are unsure where to start. An effective and pragmatic data governance implementation addresses these challenges and helps the organisation truly leverage data and unlock the strategic value of data.

The Adatis approach will provide organisations with actionable outcomes and a pilot after just 10 days.

Outputs.

By day 10 you will have a Purview pilot, findings and playback of business and technical recommendations and next steps to progress your data governance initiative.

Adatis offer professional services specialising in data analytics, from data management strategy and consultancy through to world class delivery and managed services.

With offices in London, Farnham and Sofia they have been delivering innovative and successful solutions for clients since 2006.
