Software Modernisation  
2 Hour Briefing

Codurance's 120-minute free briefing will help you understand how to drive software modernisation and innovation within your organisation. Plus, we'll give you advice on where to get started.

## Codurance's 2 hour Software Modernisation Briefing

**Codurance's 2 hour free briefing will help you understand how to drive software modernisation and innovation within your organisation. Plus, we'll give you advice on where to get started.**

The recent global pandemic has demonstrated the need, more than ever before for businesses to innovate in order to stay relevant, meet consumer demand and keep people safe. Technology is increasingly put at the heart of an organisation's strategy for growth and success.

However, outdated, inflexible legacy systems and underperforming teams can mean that taking advantage of new cloud technologies is out of the reach of many organisations, particularly for organisations where technology and product are misaligned. These businesses struggle to bridge the gap between the rate at which their business *needs* to evolve and the rate at which their software *can* evolve.

Codurance's Software Modernisation approach can help you understand how to evolve your strategic systems to enable technical and cultural change, enhance business agility, and make innovation possible.

---

### How It Works

#### **PART 1 (45 minutes)**

The first part of our briefing is a presentation by one of our Senior Leaders at Codurance who will provide an overview of Software Modernisation including:

- What is Software Modernisation
- Business & technology drivers for change
- Challenges and impediments to modernising
- Creating a strategic approach
- Aligning the business and technology vision, strategy and priorities
- Implementation techniques

#### **PART 2 (75 minutes)**

The second part of the briefing will be an open Q&A session where we will dive into your challenges, discussing the reasons why you think your software has become an obstacle to your business agility. The reasons are often a combination and related to organisation, skills, architecture, practices, technology, and even product strategy.

We'll also discuss the aspects of the talk that resonated most for your business and challenges, why they are important and some ideas about prioritising and how to get started.

---

## **Outcomes and deliverables**

A few days after the briefing, we will provide you with a report detailing our understanding of your current challenges based on the discussions and how we think Codurance's Software Modernisation approach could help you create and build the path to positive change.

---

## **The Codurance Difference**

Whichever stage of the digital journey your business is on, we can help you to evolve. Codurance is a global software consulting business, providing industry-leading expertise in modernising and building well-crafted software, advice on aligning technology choices to business goals and creating sustainable teams through training and coaching. We help our clients unlock the power of the Microsoft Azure Cloud to modernise their strategic systems and drive greater business advantage. Find out more and see who we are helping in your industry at [codurance.com](https://www.codurance.com)
