

Lifecycle Manager 365 – managing lifecycle of complex equipment

Using complex equipment effectively means having full service work and procedures done in a timely manner all throughout its lifecycle. In order to manage this kind of work, we present our equipment lifecycle management system built on the Microsoft 365 platform.

Lifecycle Manager 365 is a Microsoft 365-native application developed to manage engineering work for the implementation and maintenance of complex equipment. It lets you draw up a schedule of work and strictly monitor its implementation to ensure efficient operation of the equipment and to maintain the warranty.

- Management of all the necessary work for purchasing, delivering, installing, start-adjusting, and servicing complex technical equipment for its entire lifecycle.
- Control deadlines for equipment deployment and following service dates
- Microsoft 365 native
- Cost saving

Microsoft 365 native

- Microsoft 365 access control
- Notifications via Office 365
- Easy-to-use interface

Management of the necessary work for the complex equipment for its entire lifecycle

- Managing projects with a breakdown across locations and equipment.
- Displaying executed and planned steps of the integration/service lifecycle, with the appropriate dates for each location

Cost saving

- No need for extra software and hardware, only Microsoft 365 is needed
- Guarantee of maintaining the manufacturer's warranty
- No accidents due to timely maintenance

Work is done safely and easily

Work is done efficiently

No extra expenses

"Lifecycle Manager 365 let us to solve the most important problem that exists in every complex project - to draw up a schedule for commissioning and maintaining the supplied equipment, and to manage its implementation. The system let us control work as split by projects, locations and types of equipment, and ensured precise compliance with contractual obligations during both equipment implementation and operation."

Integration with Microsoft 365 makes lifecycle management efficient, flexible and easy

Efficient and flexible work management

- Customizable project templates for each equipment type with typical steps and technical operation cycles, their order, and the time necessary to complete them.
- Calculating the necessary resources and controlling the availability of the necessary specialists.
- System of reminders about pre-planned events.

Scalability

- 3 levels of hierarchy: the project level, the account level and the equipment level.
- Managing different locations within a single project and different pieces of equipment for each location.

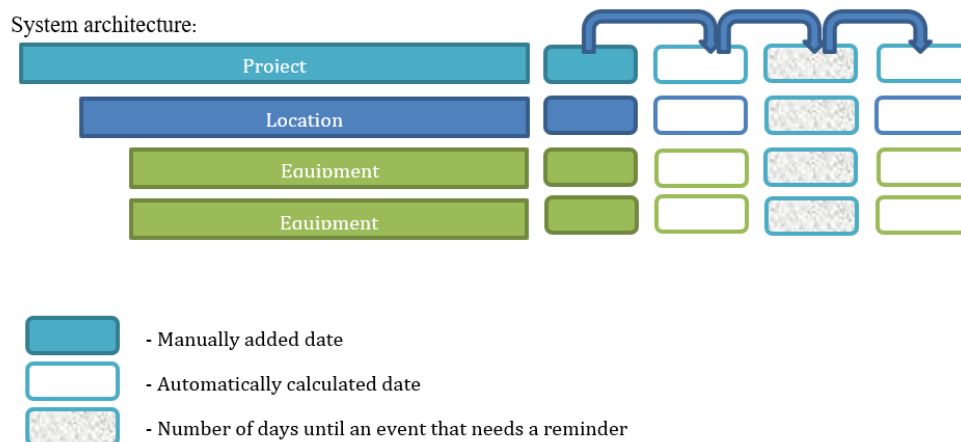

Easy of use

- One easy-to-use interface for office, remote and mobile users.
- Easy access from any device anytime from anywhere.

Lifecycle Manager 365 – ensure equipment deployment and maintenance on time and avoid financial losses!

Order Lifecycle Manager 365 and get 10% discount on Microsoft 365!

Outcomes for business

- Equipment deployed on time
- No financial losses due to warranty interruption
- No extra expenses for equipment repair due to regular maintenance at the time specified by the manufacturer
- ROI of Microsoft 365 is increased
